Handbook Karin Edvardsson Björnberg, Sven Ove Hansson, Matts-Åke Belin, Claes Tingvall, 2022-11-30 This open access handbook provides a comprehensive treatment of Vision Zero an innovative policy on public road safety developed in Sweden Covering all the major topics of the subject the book starts out with a thorough examination of the philosophy ideas and principles behind Vision Zero It looks at conditions for the effectiveness of the policy principles of safety and responsibility as well as critique on the policy Next the handbook focuses on how the Vision Zero ideas have been received and implemented in various legislations and countries worldwide It takes into account the way Vision Zero is looked at in the context of international organizations such as the WHO the UN and the OECD This allows for a comparison of systems models and effects The third part of the handbook discusses the management and leadership aspects including ISO standards equity issues other goals for traffic and transportation and opportunities for the car industry Part four delves into tools technologies and organizational measures that contribute to the implementation of Vision Zero in road traffic Examples of specific elements discussed are urban and rural road designs human factor designs and avoiding drunk and distracted driving The final part of the handbook offers perspectives on the transfer of Vision Zero policy to other areas ranging from air traffic to suicide prevention and nuclear energy Vision Zero is a public road safety policy including both a long term goal that no one shall be killed or seriously injured as a consequence of accidents in road traffic and a safety principle stating that the design and function of the road transport system shall be adapted to meet the requirements that follow from that goal It is a new road safety paradigm which has resulted in new types of responsibilities among stakeholders technological innovations and new strategies and organizational measures to achieve a safe system The road safety work based on Vision Zero has shown promising results and although Sweden has not yet reached a safe system the number of fatalities and severe injuries has decreased substantially This is an open access book **Traffic Safety and Human Behavior** David Shinar, 2017-06-22 This comprehensive 2nd edition covers the key issues that relate human behavior to traffic safety In particular it covers the increasing roles that pedestrians and cyclists have in the traffic system the role of infotainment in driver distraction and the increasing role of driver assistance systems in changing the driver vehicle interaction Handbook of Human Factors for Automated, Connected, and Intelligent Vehicles Donald L. Fisher, William J. Horrey, John D. Lee, Michael A. Regan, 2020-05-31 Handbook of Human Factors for Automated Connected and Intelligent Vehicles Subject Guide Ergonomics Human Factors

Automobile crashes are the seventh leading cause of death worldwide resulting in over 1.25 million deaths yearly. Automated connected and intelligent vehicles have the potential to reduce crashes significantly while also reducing congestion, carbon emissions, and increasing accessibility. However, the transition could take decades. This new handbook serves a diverse community of stakeholders including human factors researchers, transportation engineers, regulatory agencies, automobile manufacturers, fleet operators, driving instructors, vulnerable road users, and special populations. It provides information about the human driver, other road users, and human automation interaction in a single integrated compendium in order to ensure that automated connected and intelligent vehicles reach their full potential. Features: Addresses four major transportation challenges: crashes, congestion, carbon emissions, and accessibility from a human factors perspective. Discusses the role of the human operator relevant to the design, regulation, and evaluation of automated connected and intelligent vehicles. Offers a broad treatment of the critical issues and technological advances for the designing of transportation systems with the driver in mind. Presents an understanding of the human factors issues that are central to the public acceptance of these automated connected and intelligent vehicles. Leverages lessons from other domains in understanding human interactions with automation. Sets the stage for future research by defining the space of unexplored questions.

Jiao Tong Xin Li Xue Shou Ce ,2023 A Handbook of Theories on Designing Alignment Between People and the Office Environment Rianne Appel-Meulenbroek,Vitalija Danivska,2021-06-16 Although workplace design and management are gaining more and more attention from modern organizations workplace research is still very fragmented and spread across multiple disciplines in academia There are several books on the market related to workplaces facility management FM and corporate real estate management CREM disciplines but few open up a theoretical and practical discussion across multiple theories from different fields of studies Therefore workplace researchers are not aware of all the angles from which workplace management and effects of workplace design on employees has been or could be studied A lot of knowledge is lost between disciplines and sadly many insights do not reach workplace managers in practice Therefore this new book series is started by associate professor Rianne Appel Meulenbroek Eindhoven University of Technology the Netherlands and postdoc researcher Vitalija Danivska Aalto University Finland as editors published by Routledge It is titled Transdisciplinary Workplace Research and Management because it bundles important research insights from different disciplinary fields and shows its relevance for both academic workplace research and workplace management in practice The books will address the complexity of the transdisciplinary angle necessary to solve ongoing workplace related issues in practice such as knowledge worker productivity office use and more strategic workplace management In addition the editors work towards further collaboration and integration of the necessary disciplines for further development of the workplace field in research and in practice This book series is relevant for workplace experts both in academia and industry This first book in the series focuses on the employee as a user of the work environment The 21 theories discussed and applied to workplace design in this book address people s ability to do their job and thrive in relation to the office workplace Some focus more on explaining why people behave the way they do the psychosocial environment while others take the physical and or digital workplace quality as a starting point to explain employee outcomes such as health satisfaction and performance They all explain different aspects for achieving employee workplace alignment EWA and thereby ensuring employee thriving The final chapter describes a first step towards integrating these theories into an overall interdisciplinary

framework for eventually developing a grand EWA theory The Open Access version of this book available at <http://www.taylorfrancis.com/books/e/9781003128830> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Behavioural Adaptation and Road Safety Christina Rudin-Brown, Samantha Jamson, 2013-05-24 Despite being an accepted construct in traffic and transport psychology the precise nature of behavioural adaptation including its causes and consequences has not yet been established within the road safety community A comprehensive collection of recent literature Behavioural Adaptation and Road Safety Theory Evidence and Action explores behavioural adaptation in road users It examines behavioural adaptation within the context of historical and theoretical perspectives and puts forth tangible and practical solutions that can effectively address adverse behavioural adaptation to road safety interventions before it occurs Edited by Christina Rudin Brown and Samantha Jamson with chapters authored by leading road safety experts in driver psychology and behaviour the book introduces the concept of behavioural adaptation and details its more relevant issues It reviews the definition of behavioural adaptation that was put forward by the OECD in 1990 and then puts this definition through its paces identifying where it may be lacking and how it might be improved This sets the context for the remaining chapters which take the OECD definition as their starting points The book discusses the various theories and models of behavioural adaptation and more general theories of driver behaviour developed during the last half century It provides examples of the evidence for behavioural adaptation instances in which behavioural adaptation arose as a consequence of the introduction of safety countermeasures The book then focuses on the internal human element and considers countermeasures that might be used to limit the development of behavioural adaptation in various road user groups The book concludes with practical tools and methodologies to address behavioural adaptation in research and design and to limit the potential negative effects before they happen Supplying easy to understand accessible solutions that can be implemented early on in a road safety intervention s design or conception phase the chapters represent the most extensive compilation of literature relating to behavioural adaptation and its consequences since the 1990 OECD report The book brings together earlier theories of behavioural adaptation with more recent theories in the area and combines them with practical advice methods and tangible

solutions that can minimise the potential negative impact of behavioural adaptation on road user safety and address it before it occurs It is an essential component of any road safety library and should be of particular relevance to researchers practitioners designers and policymakers who are interested in maximizing safety while at the same time encouraging innovation and excellence in road transport related design
