National Highway Traffic Safety Administration,1994 **THE ROLE OF AI IN BATTERY MANAGEMENT OF ELECTRIC VEHICLES** Dr. Manish K. Saini,Dr. Sunita Saini,Dr. Ram Paul,Dr. Akanksha Aggarwal,2024-03-07 It is unfortunate that the rapid growth of the economy has resulted in problems such as pollution traffic congestion and energy shortages all of which have contributed to a decline in the quality of life of the general population As a result of its low emissions energy consumption and pollution levels new energy cars have caught the attention of numerous national governments throughout the globe In China these vehicles have reached a national strategic level Every year China s dependency on crude oil that is imported from other countries increases According to the National Energy Administration China s dependency on imported crude oil reached 73% in the year 2020 This has a major effect on energy security since it is higher than the universally accepted threshold of 50% for energy security Considering that China is experiencing a shortage of energy the country puts a high strategic significance on the research and development of vehicles that utilize new energy A public statement of China s national objectives has been made in recent years These targets include attaining carbon neutrality in the year 2060 and reaching a carbon peak in the year 2030 In terms of the long term sustainability of the automotive industry new energy vehicles are the connecting element that holds everything together In order to address the energy and environmental issues the development of alternative energy vehicles is a potential answer To restate China will not be able to achieve its goal of being carbon neutral unless it makes significant investments in alternative fuel vehicles This is due to the fact that there is no amount of hype about a new energy revolution The term new energy vehicle refers to a vehicle that incorporates the most recent advancements in power control and drive technology with the established technology that is present in traditional cars The power generation process is accomplished by the utilisation of unconventional vehicle fuel or a mix of conventional vehicle gasoline and an on board power plant **Automobile Dealer**

and Repairer A. A. Hill,1921 *Towards Sustainable Road Transport* Ronald M. Dell,Patrick T. Moseley,David A. J. Rand,2014-06-11 Increasing pressure on global reserves of petroleum at a time of growing demand for personal transport in developing countries together with concerns over atmospheric pollution and carbon dioxide emissions are leading to a requirement for more sustainable forms of road transport Major improvements in the efficiency of all types of road vehicles are called for along with the use of fuels derived from alternative sources or entirely new fuels Towards Sustainable Road Transport first describes the evolution of vehicle designs and propulsion technologies over the past two centuries before looking forward to possible new forms of energy to substitute for petroleum The book also discusses the political and socio economic drivers for change investigates barriers to their broad implementation and outlines the state of the art of candidate power sources advanced vehicle design and associated infrastructure The comprehensive technical informationsupplied by an expert author team ensures that Towards Sustainable Road Transport will provide readers with a clear understanding of the ongoing progress in this field and the challenges still to be faced Drivers of technological change in road transport and the infrastructure requirements Discussion of alternative fuels for internal combustion engines and fuel conversion technologies Detailed exploration of current and emerging options for vehicle propulsion with emphasis on hybrid battery electric traction hydrogen and fuel cells Comparative analysis of vehicle design requirements primary power source efficiency and energy storagesystems Federal Motor Vehicle Safety Standards and Regulations, with Amendments and Interpretations United States.
