Fuzzy Evolutionary Computation Witold Pedrycz, 2012-12-06 As of today Evolutionary Computing and Fuzzy Set Computing are two mature well developed and highly advanced technologies of information processing Each of them has its own clearly defined research agenda specific goals to be achieved and a well set algorithmic environment Concisely speaking Evolutionary Computing EC is aimed at a coherent population oriented methodology of structural and parametric optimization of a diversity of systems In addition to this broad spectrum of such optimization applications this paradigm offers an important ability to cope with realistic goals

and design objectives reflected in the form of relevant fitness functions The GA search which is often regarded as a dominant domain among other techniques of EC such as evolutionary strategies genetic programming or evolutionary programming delivers a great deal of efficiency helping navigate through large search spaces The main thrust of fuzzy sets is in representing and managing nonnumeric linguistic information The key notion whose conceptual as well as algorithmic importance has started to increase in the recent years is that of information granularity It somewhat concurs with the principle of incompatibility coined by L A Zadeh Fuzzy sets form a vehicle helpful in expressing a granular character of information to be captured Once quantified via fuzzy sets or fuzzy relations the domain knowledge could be used efficiently very often reducing a heavy computation burden when analyzing and optimizing complex systems
