Control of Salmonella and Other Bacterial Pathogens in Low-Moisture Foods Richard Podolak, Darryl G. Black, 2017-09-05 The first and only comprehensive reference solutions manual for managing food safety in low moisture foods The first book devoted to an increasingly critical public health issue Control of Salmonella and Other Bacterial Pathogens in Low Moisture Foods reviews the current state of the science on the prevalence and persistence of bacterial pathogens in low moisture foods and describes proven techniques for preventing food contamination for manufacturers who produce those foods Many pathogens such as Salmonella due to their enhanced thermal resistance in dry environments can survive the drying process and may persist for prolonged periods in low moisture foods especially when stored in refrigerated environments Bacterial contamination of low moisture foods such as peanut butter present a vexing challenge to food safety and especially now in the wake of widely publicized food safety related events food processors urgently need up to date practical information on proven measures for containing the risk of contamination While much has been written on the subject until now it was scattered throughout the world literature in scientific and industry journals The need for a comprehensive treatment of the subject has never been greater and now this book satisfies that need Discusses a wide variety of foods and evaluates multiple processing platforms from the standpoint of process validation of all food safety objectives for finished food products Takes a practical approach integrating the latest scientific and technological advances

in a handy working resource Presents all known sources and risk factors for pathogenic bacteria of concern in the manufacturing environment for low moisture water activity products Characterizes the persistence and thermal resistance of bacterial pathogens in both the environment and most low moisture food products Control of Salmonella and Other Bacterial Pathogens in Low Moisture Foods is a much needed resource for food microbiologists and food industry scientists as well as managers and executives in companies that produce and use low moisture foods It also belongs on the reference shelves of food safety regulatory agencies worldwide *Ice Cream* H. Douglas Goff,Richard W. Hartel,Scott A. Wilson,2015-12-29 Peanuts Genetics Processing and Utilization Oilseed Monograph presents innovations in crop productivity and processing technologies that help ensure global food security and high quality peanut products The authors cover three central themes modern breeding methods for development of agronomic varieties in the U S China West Central Africa and India enhanced crop protection and quality through information from the peanut genome sequence and state of the art processing and manufacturing of products in market environments driven by consumer perception legislation and governmental policy Discusses modern breeding methods and genetically diverse resources for the development of

agronomic varieties in the U S China India and West Central Africa Provides enhanced crop protection and quality through the application of information and genetic tools derived from analysis of the peanut genome sequence Includes state of art processing and manufacture of safe nutritious and flavorful food products **Food Safety Management** Tim

Jackson,2013-11-01 Microbiological testing programs play an important role in the verification of the effectiveness of control measures for many food products Such programs may include monitoring of the production environment and processing equipment and testing of raw materials in process and finished products The relevance and application of testing programs depend upon the design of the product and process the hygienic status of the processing environment and the availability of other verification information about a product lot The design and implementation of environmental monitoring programs consider the areas of product exposure and the potential impact of the movement of people materials and product on product contamination Raw material testing programs consider the inherent risk of the material its use in the process and the confidence in the supplier determined by supplier audits and ongoing performance Finished product testing programs consider customer and regulatory requirements and the hygienic status of the process and production environment Due to statistical and temporal limitations microbiological testing programs are most effective when used along with risk based preventive controls such as HACCP hygienic zoning and other prerequisite programs and when they work together with other verification activities to assess the condition of a food safety system The Microbiological Safety of Low Water

Activity Foods and Spices Joshua B. Gurtler,Michael P. Doyle,Jeffrey L. Kornacki,2014-12-08 Low water activity aw and dried foods such as dried dairy and meat products grain based and dried ready to eat cereal products powdered infant formula peanut and nut pastes as well as flours and meals have increasingly been associated with product recalls and foodborne outbreaks due to contamination by pathogens such as Salmonella spp and enterohemorrhagic E coli In particular recent foodborne outbreaks and product recalls related to Salmonella contaminated spices have raised the level of public health concern for spices as agents of foodborne illnesses Presently most spices are grown outside the U S mainly in 8 countries India Indonesia China Brazil Peru Madagascar Mexico and Vietnam Many of these countries are under developed and spices are harvested and stored with little heed to sanitation The FDA has regulatory oversight of spices in the United States however the agency s control is largely limited to enforcing regulatory compliance through sampling and testing only after imported foodstuffs have crossed the U S border Unfortunately statistical sampling plans are inefficient tools for ensuring total food safety As a result the development and use of decontamination treatments is key This book provides an understanding of the microbial challenges to the safety of low aw foods and a historic backdrop to the paradigm shift now highlighting low aw foods as vehicles for foodborne pathogens Up to date facts and figures of foodborne illness outbreaks and product recalls are included Special attention is given to the uncanny ability of Salmonella to persist under dry conditions in food processing plants and foods A section is dedicated specifically to processing plant investigations providing

practical approaches to determining sources of persistent bacterial strains in the industrial food processing environment Readers are guided through dry cleaning wet cleaning and alternatives to processing plant hygiene and sanitation Separate chapters are devoted to low aw food commodities of interest including spices dried dairy based products low aw meat products dried ready to eat cereal products powdered infant formula nuts and nut pastes flours and meals chocolate and confectionary dried teas and herbs and pet foods The book provides regulatory testing guidelines and recommendations as well as guidance through methodological and sampling challenges to testing spices and low aw foods for the presence of foodborne pathogens Chapters also address decontamination processes for low aw foods including heat steam irradiation microwave and alternative energy based treatments
