Chem Worksheet

Name _____

A manometer is a device that measures the pressure of a gas in an enclosed container. It is made from a U-shaped tube filled with mercury. The pressure of the gas in the container is compared to the pressure from the atmosphere. If the gas pressure is the same as the atmospheric pressure the level of mercury in both sides of the U-tube will be the same. If the gas is at a higher pressure than the atmosphere the mercury level on the side open to the atmosphere will be higher. If the gas is at a lower pressure than the atmosphere the mercury level on the side open to the atmosphere will be lower.

USEFUL EQUATIONS

$$1.00 \text{ atm} = 101300 \text{ Pa}$$

$$1.00 \text{ atm} = 101.3 \text{ kPa}$$

$$1.00 \text{ atm} = 14.7 \text{ psi}$$

$$1.00 \text{ atm} = 760 \text{ torr}$$

$$1.00 \text{ atm} = 760 \text{ mmHg}$$

$$1 \text{ cm} = 10 \text{ mm}$$

example

An enclosed container of gas is connected to a manometer. The mercury level is 8 cm lower on the side connected to the gas sample. If atmospheric pressure is .984 atm find the pressure of the gas in the container.

- draw a picture

- convert all measurements to mm Hg

$$\frac{8 \text{ cm}}{1} \times \frac{10 \text{ mm}}{1 \text{ cm}} = 80 \text{ mm}$$

$$\frac{.984 \text{ atm}}{1} \times \frac{760 \text{ mmHg}}{1.00 \text{ atm}} = 748 \text{ mmHg}$$

- add or subtract the measurements based on the drawing

$$748 \text{ mmHg} + 80 \text{ mmHg} = 828 \text{ mmHg}$$

Solve the following problems. Draw a picture of the manometer for each problem.

1. What is the pressure of the neon gas sample in the manometer shown to the right?
2. A container of helium is connected to a manometer and the mercury level is 145 mm lower on the side open to the atmosphere. Atmospheric pressure is 775 mm Hg. Find the pressure of the helium.
3. The mercury in a manometer is 38 mm lower on the side connected to sample of oxygen gas. If the atmospheric pressure is 95.2 kPa determine the pressure of the oxygen.
4. What is the pressure of the carbon dioxide in the manometer shown to the right?
5. The atmosphere has a pressure of 680 torr. An air-filled container has a pressure of 18.9 PSI and is connected to a manometer. Draw a picture of the manometer and determine the height of the mercury column supported by the air.
6. A basketball is attached to a manometer and the mercury is 18 mm higher on the side connected to the atmosphere. The pressure of the atmosphere is 0.95 atm. Find the pressure in the basketball.
7. What is the pressure in pascals for the air sample in the manometer pictured to the right?
8. A gas container is connected to a manometer. The mercury in the manometer is 7.2 cm lower on the side open to the atmosphere. Atmospheric pressure is measured to be 755 mm Hg. What is the pressure of the gas in atmospheres?

Essentials of Modern Materials Science and Engineering James A. Newell, 2008-12-15 This book begins with four fundamental tenants The properties of a material are determined by its structure Processing can alter that structure in specific and predictable ways The behavior of materials is grounded in science and is understandable The properties of all materials change over time with use and exposure to environmental conditions When selecting a material sufficient and appropriate testing must be performed to insure that the material will remain suitable throughout the reasonable life of the product This text assumes that the students are at least sophomores so that they are familiar with basic chemical bonding and the periodic table But it is an introductory materials course so there will be no differential equations percolation theory quantum mechanics statistical thermodynamics or other advanced topics The book is designed as an introduction to the field not a comprehensive guide to all materials science knowledge Instead of going into great detail in many areas the book provides key concepts and fundamentals students need to understand materials science and make informed decisions An example of the philosophy is found in the materials testing section Although countless variations exist in testing techniques the chapter focuses on operating principles and the property to be measured rather than confusing the student with exposition on variations and exceptions That material is beyond the scope of most introductory courses
