Douglas,Ljudmila Kamenova,Martin Rocek,2014-12-02 This volume contains the proceedings of the conference String Math 2013 which was held June 17 21 2013 at the Simons Center for Geometry and Physics at Stony Brook University This was the third in a series of annual meetings devoted to the interface of mathematics and string theory Topics include the latest developments in supersymmetric and topological field theory localization techniques the mathematics of quantum field theory superstring compactification and duality scattering amplitudes and their relation to Hodge theory mirror symmetry and two dimensional conformal field theory and many more This book will be important reading for researchers and students in the area and for all mathematicians and string theorists who want to update themselves on developments in the math string interface   *The Learning and Development of Mathematics Teacher Educators* Merrilyn Goos,Kim Beswick,2021-04-07 Research in mathematics teacher education as a distinctive field of inquiry has grown substantially over the past 10 15 years Within this field there is emerging interest in how mathematics teacher educators MTEs themselves learn and develop Until recently there were few published studies on this topic and the processes by which mathematics teacher educators learn and the forms of knowledge they require for effective practice had not been systematically investigated However researchers in mathematics education are now beginning to investigate the development of MTE expertise and associated issues This volume draws on the latest research and thinking in this area is therefore timely to stimulate future development and directions It will survey the emerging field of inquiry in mathematics education combining the work of established scholars with perspectives of newcomers to the field with the aim of influencing development of the field invite cross cultural comparisons in becoming a mathematics teacher educator by highlighting issues in the development of MTEs in different countries and examine the roles of both mathematics educators and mathematicians in preparing future teachers of mathematics The primary audience will be university based mathematics teacher educators and MTE researchers and postgraduate research students who are seeking academic careers as MTEs Additional interest may come from teacher educators in disciplines other than mathematics and education policy makers responsible for accreditation and quality control of initial teacher education programs   Mathematics and the Body Elizabeth de Freitas,Nathalie Sinclair,2014-06-02 This book expands the landscape of research in mathematics education by analyzing how the body influences mathematical thinking   Third Symposium Proceedings. New Ways of Teaching and Learning Janina Morska,Alan Rogerson, This volume contains the papers presented at the Third International Symposium on New Ways of Teaching Learning held from August 6 10 2024 at the Aemilia Hotel Bologna Italy The Conference was organized by The Mathematics Education for the Future Project an international educational project founded in 1986 and dedicated to innovation in mathematics statistics science and computer education world wide   Mathematics of Wave Phenomena Willy Dörfler,Marlis Hochbruck,Dirk Hundertmark,Wolfgang Reichel,Andreas Rieder,Roland Schnaubelt,Birgit

Schörkhuber,2020-10-01 Wave phenomena are ubiquitous in nature Their mathematical modeling simulation and analysis lead to fascinating and challenging problems in both analysis and numerical mathematics These challenges and their impact on significant applications have inspired major results and methods about wave type equations in both fields of mathematics The Conference on Mathematics of Wave Phenomena 2018 held in Karlsruhe Germany was devoted to these topics and attracted internationally renowned experts from a broad range of fields These conference proceedings present new ideas results and techniques from this exciting research area **Foundations of Mathematics** Andrés Eduardo Caicedo,James Cummings,Peter Koellner,Paul B. Larson,2017-05-12 This volume contains the proceedings of the Logic at Harvard conference in honor of W Hugh Woodin s 60th birthday held March 27 29 2015 at Harvard University It presents a collection of papers related to the work of Woodin who has been one of the leading figures in set theory since the early 1980s The topics cover many of the areas central to Woodin s work including large cardinals determinacy descriptive set theory and the continuum problem as well as connections between set theory and Banach spaces recursion theory and philosophy each reflecting a period of Woodin s career Other topics covered are forcing axioms inner model theory the partition calculus and the theory of ultrafilters This volume should make a suitable introduction to Woodin s work and the concerns which motivate it The papers should be of interest to graduate students and researchers in both mathematics and philosophy of mathematics particularly in set theory foundations and related areas **Mobile Learning and Mathematics** Helen Crompton,John Traxler,2015-02-11 Mobile Learning and Mathematics provides an overview of current research on how mobile devices are supporting mathematics educators in classrooms across the globe Through nine case studies chapter authors investigate the use of mobile technologies over a range of grade levels and mathematical topics while connecting chapters provide a strong foundational background in mobile learning theories instructional design and learner support For current educators Mobile Learning and Mathematics provides concrete ideas and strategies for integrating mobile learning into their mathematics instruction for example by sharing resources that will help implement Common Core State Standards or by streamlining the process of selecting from the competing and often confusing technology options currently available A cutting edge research volume this collection also provides a springboard for educational researchers to conduct further study Generic Stabilizers in Actions of Simple Algebraic Groups R. Office of Management and Budget,2015 **Up Your Score, 2013-2014 Edition** Larry Berger,Michael Colton,Manek Mistry,JaJa Liao,Paul Rossi,2012-01-01 Covers preparation for the math and verbal sections of the SAT and gives insider tips and tricks on taking the test and boosting one s score **An Introduction to q-analysis** Warren P. Johnson,2020-10-06 Starting from simple generalizations of factorials and binomial coefficients this book gives a friendly and accessible introduction to q q analysis a subject consisting primarily of identities between certain kinds of series and products Many applications of these identities to combinatorics and number theory are developed in detail There are numerous exercises to help students appreciate the beauty and power of the ideas and the history of the subject is kept consistently in view The book has few prerequisites beyond calculus It is well suited to a capstone course or for self study in combinatorics or classical analysis Ph D students and research mathematicians will also find it useful as a reference *Teacher Preparation in Scotland* Rachel Shanks,2020-09-25 This book charts the origins and development of teacher preparation in Scotland from 1872 onwards covering key milestones in policy and practice and looking ahead to the future It is a truly comprehensive record of the historic current and potential evolution of teacher preparation in Scotland **Simple Supercuspidal L-Packets of Quasi-Split Classical Groups** Masao Oi,2024-06-07 View the abstract **Rank 2 Amalgams and Fusion Systems** Martin van Beek,2024-04-19 This monograph provides a comprehensive treatment of the classification of small fusion systems that is fusion systems with few essential subgroups It demonstrates a broad range of techniques from local group theory and fusion systems several of which can be applied in more general settings Addressing research problems that have not been treated in the past it is the first text to explicitly use the amalgam method in this context Fusion systems offer an enticing way to unify various p local methods employed in group theory representation theory and homotopy theory but as abstract constructions they are still somewhat mysterious This book paves the way to a broad and systematic study of these categories by applying

the amalgam method thus modernizing a methodology widely used to understand the local structure of finite groups With this comes an introduction to several vital techniques in local group theory a generous survey of the structure and modular representation theory of some important families of finite groups and a demonstration of the value of combinatorial methods in finite group theory and fusion systems Primarily aimed at researchers active in fusion systems and group amalgams the book will also be of interest to anyone working with finite groups and their modular representations group actions on trees or classifying spaces The inclusion of preliminary chapters outlining the theoretical prerequisites make it ideal for a short lecture course or as a reading group text for early career researchers and graduate students <u>Computers and Society</u> Ronald M. Baecker,2019-04-24 The last century has seen enormous leaps in the development of digital technologies and most aspects of modern life have changed significantly with their widespread availability and use Technology at various scales supercomputers corporate networks desktop and laptop computers the internet tablets mobile phones and processors that are hidden in everyday devices and are so small you can barely see them with the naked eye all pervade our world in a major way Computers and Society Modern Perspectives is a wide ranging and comprehensive textbook that critically assesses the global technical achievements in digital technologies and how are they are applied in media education and learning medicine and health free speech democracy and government and war and peace Ronald M Baecker reviews critical ethical issues raised by computers such as digital inclusion security safety privacy automation and work and discusses social political and ethical controversies and choices now faced by society Particular attention is paid to new and exciting developments in artificial intelligence and machine learning and the issues that have arisen from our complex relationship with AI *The Irreducible Subgroups of Exceptional Algebraic Groups* Adam R. Thomas,2021-06-18 This paper is a contribution to the study of the subgroup structure of excep tional algebraic groups over algebraically closed elds of arbitrary characteristic Following Serre a closed subgroup of a semisimple algebraic group G is called irreducible if it lies in no proper parabolic subgroup of G In this paper we com plete the classi cation of irreducible connected subgroups of exceptional algebraic groups providing an explicit set of representatives for the conjugacy classes of such subgroups Many consequences of this classi cation are also given These include results concerning the representations of such subgroups on various G modules for example the conjugacy classes of irreducible connected subgroups are determined by their composition factors on the adjoint module of G with one exception A result of Liebeck and Testerman shows that each irreducible connected sub group X of G has only nitely many overgroups and hence the overgroups of X form a lattice We provide tables that give representatives of each conjugacy class of connected overgroups within this lattice structure We use this to prove results concerning the subgroup structure of G for example when the characteristic is 2 there exists a maximal connected subgroup of G containing a conjugate of every irreducible subgroup A1 of G **Generalized Descriptive Set Theory and Classification Theory** Sy-David Friedman,Tapani Hyttinen, Vadim Kulikov,2014-06-05 Descriptive set theory is mainly concerned with studying subsets of the

space of all countable binary sequences In this paper the authors study the generalization where countable is replaced by uncountable They explore properties of generalized Baire and Cantor spaces equivalence relations and their Borel reducibility The study shows that the descriptive set theory looks very different in this generalized setting compared to the classical countable case They also draw the connection between the stability theoretic complexity of first order theories and the descriptive set theoretic complexity of their isomorphism relations The authors results suggest that Borel reducibility on uncountable structures is a model theoretically natural way to compare the complexity of isomorphism relations
