Maths Standardisation Grade 11 2013 Paper 2 Marking:

The Education Invasion Joy Pullmann, 2017-03-14 Most Americans had no idea what Common Core was in 2013 according to polls But it had been creeping into schools nationwide over the previous three years and children were feeling its effects They cried over math homework so mystifying their parents could not help them even in elementary school They read motley assortments of informational text instead of classic literature They dreaded the high stakes tests in unfamiliar formats that were increasingly controlling their classrooms How did this latest and most sweeping reform of American education come in mostly under the radar Joy Pullmann started tugging on a thread of reports from worried parents and frustrated teachers and it led to a big tangle of history and politics intrigue and arrogance She unwound it to discover how a cabal of private foundation honchos and unelected public officials cooked up a set of rules for what American children must learn in core K 12 classes and how the Obama administration pressured states to adopt them Thus a federalized education scheme took root despite legal prohibitions against federal involvement in curriculum Common Core and its testing regime were touted as an absolute game changer in public education yet the evidence so far suggests that kids are actually learning less under it Why then was such a costly and disruptive agenda imposed on the nation's schools Who benefits And how can citizens regain local self governance in education so their children's minds will be fed a more nourishing intellectual diet and be protected from the experiments of emboldened bureaucrats *The Education Invasion* offers answers and remedies **On Your Mark**

Education in a Federal UK John Furlong, Ingrid Lunt, 2019-10-23 Britain s two recent referenda on Brexit 2016 and on Scottish independence 2014 have raised in the public mind fundamental questions about the future of the UK It seems that for the first time the public the media and the political elite have woken up to the fact that in different parts of the UK there are different histories different aspirations and different imagined futures in relation to a whole range of vitally important political issues But what the public debate often fails to recognise is that in many areas of public life perhaps especially education the UK is already a federal state and in key respects has been so for many years The aim of this volume is therefore to take stock to try and capture what the current state of educational policy and practice is across the whole of the UK This has been achieved by commissioning two different papers from each of the four countries Wales Scotland Northern Ireland and England The first is an overview exploring the distinctive history principles and current policies of each country The second paper has been specifically chosen as a case study of a key policy that highlights the distinctiveness of each country the Foundation Phase for Wales assessment policy in Scotland shared education initiatives in Northern Ireland and higher education policy in England Taken together these eight papers give an important insight into the complexities of educational policy and practice across the whole of the UK today This volume was originally published as a special issue of Oxford Review of Education
