Chapman, 2002 This book is intended for a course that combines machinery and power systems into one semester. It is designed to be flexible and to allow instructors to choose chapters a la carte so the instructor controls the emphasis. The text gives students the information they need to become real world engineers focusing on principles and teaching how to use information as opposed to doing a lot of calculations that would rarely be done by a practising engineer. The author compresses the material by focusing on its essence underlying principles. MATLAB is used throughout the book in examples and problems. **Subject Guide to Books in Print**, 1997 **The British National Bibliography** Arthur James Wells, 2009 Essentials of MATLAB Programming Stephen J.
