BIM models of buildings are deep reservoirs of information that can provide valuable spatial and mechanical details on every aspect of a property. When used appropriately, this data can improve performance and save time, effort, and money in running and maintaining the building during its life cycle. It can also provide information for future modifications. For instance, a BIM could reveal everything from the manufacturer of a light fixture to its energy usage to maintenance instructions. BIM for Facility Managers explains how BIM can be linked to facility management FM systems to achieve very significant life cycle advantages. It presents guidelines for using BIM in FM that have been developed by public and private owners such as the GSA. There is an extensive discussion of the legal and contractual issues involved in BIM FM integration. It describes how COBie can be used to name capture and communicate FM related data to downstream systems. There is also extensive discussion of commercial software tools that can be used to facilitate this integration. This book features six in depth case studies that illustrate how BIM has been successfully integrated with facility management in real life projects at Texas A M Health Science Center, USC School of Cinematic Arts, MathWorks new campus, Xavier University, State of Wisconsin Facilities, University of Chicago Library renovation. Innovation for inclusive

value-chain development Devaux, André, Torero, Maximo, Donovan, Jason, Horton, Douglas E., 2016-10-21 Governments, nongovernmental organizations, donors, and the private sector have increasingly embraced value chain development (VCD) for stimulating economic growth and combating rural poverty. Innovation for Inclusive Value Chain Development: Successes and Challenges helps to fill the current gap in systematic knowledge about how well VCD has performed, related trade-offs or undesired effects, and which combinations of VCD elements are most likely to reduce poverty and deliver on overall development goals. This book uses case studies to examine a range of VCD experiences. Approaching the subject from various angles, it looks at new linkages to markets and the role of farmer organizations and contract farming in raising productivity and access to markets; the minimum assets requirement to participate in VCD; the role of multi-stakeholder platforms in VCD; and how to measure and identify successful VCD interventions. The book also explores the challenges livestock-dependent people face, how urbanization and advancing technologies affect linkages, ways to increase gender inclusion and economic growth, and the different roles various types of platforms play in VCD.
