

Mixtures and Solutions

How do mixtures and solutions compare?

Brass is a solid (zinc) dissolved in a solid (copper).

A soft drink is a gas (carbon dioxide) dissolved in a liquid (water).

Ocean water contains solids (salts) dissolved in a liquid (water).

Antifreeze is a liquid (alcohol) dissolved in a liquid (water).

Solutes and solvents can be solids, liquids, or gases.

A **mixture** is a combination of two or more substances that are not chemically combined. The parts of a mixture can be physically separated, although sometimes this is difficult. Each substance in a mixture keeps its original identity. If you picked out the peas from a mixture of peas and carrots, you would find that they haven't changed. They are still peas. You used differences in their color and shape to separate peas and carrots. Other mixtures can be separated by differences in their physical properties, such as density (sand and sawdust), magnetism

(iron and aluminum), or solubility (table salt and sand).

A **solution** is a mixture made of two or more substances that are evenly distributed throughout the mixture. Solutions are made when one substance dissolves in another substance. The substance that is being dissolved is the **solute**. The substance in which the solute is dissolved is the **solvent**. A substance that is able to dissolve in a given solvent is **soluble** in that solvent. If a solute cannot dissolve, it is **insoluble**.

Show What You Know

1. A _____ is a mixture in which the particles are evenly distributed.
2. A substance is _____ if it dissolves in a certain solvent.
3. In a solution, a _____ is the substance being dissolved.
4. In a solution, a _____ is the substance in which something is dissolved.
5. A substance is _____ if it does not dissolve in a certain solvent.

Spellman, 2023-07-31 To properly

operate a waterworks or wastewater treatment plant and to pass the examination for a waterworks wastewater operator's license it is necessary to know how to perform certain calculations. All operators at all levels of licensure need a basic understanding of arithmetic and problem solving techniques to solve the problems they typically encounter in the workplace. Hailed on its first publication as a masterly account written in an engaging, highly readable, user-friendly style, the fully updated **Mathematics Manual for Water and Wastewater Treatment Plant Operators** Water Treatment Operations covers all the necessary computations used in water treatment today. It presents math operations that progressively advance to higher, more practical applications, including math operations that operators at the highest level of licensure would be expected to know and perform. Features: Provides a strong foundation based on theoretical math concepts which it then applies to solving practical problems for both water and wastewater operations. Updated throughout and with several new practical problems added. Provides illustrative examples for commonly used waterworks and wastewater treatment operations covering unit process operations found in today's treatment facilities.
