

## Energy Storage and Transfer Model Problems for Energy Transfer and Power

1. A capacitor stores energy when connected to a battery. Calculate the energy stored in a capacitor (200  $\mu\text{F}$ ) in a local electric field. The electric field is about  $1 \text{ kV/m}$ . (Using your calculations for capacitance.)
- a. How long would the capacitor store an amount of energy equal to what energy does a battery?

- b. If all of the energy from the capacitor's electric field were stored within the strong proton magnetic fields associated with the top of a neutron star (superdense matter), how many protons would be added while the energy from the capacitor is stored in the strong magnetic field? (Assume the energy from a proton is about  $10^{14} \text{ J}$ .)

Energy Transfer Diagram

2. A neutron star has top of the strong proton magnetic fields, which store energy. Calculate the energy stored in a neutron star (100  $\text{km}$  radius) with a magnetic field of  $10^{14} \text{ T}$ . (Using your calculations for capacitance.)
