Chapter 1

Trade in a Model with no Frictions

Exercise 1.1 (a) Equation 1.1 (Total amount of the consumption good in) $_t = N_t y_1 + N_{t-1} y_2$

- Equation 1.2 (Total consumption by the young) $_t = N_t c_{1t}$
- Equation 1.3 (Total consumption by the old) $_t = N_{t-1} c_{2t}$
- Equation 1.4 Feasibility constraint:

$$N_t c_{1t} + N_{t-1} c_{2t} \leq N_t y_1 + N_{t-1} y_2$$

With a constant population, we have,

$$N c_{1t} + N c_{2t} \leq N y_1 + N y_2$$

Dividing throughout by N , we have

- Equation 1.5 $c_{1t} + c_{2t} \leq y_1 + y_2$
- Equation 1.6 Assuming a stationary allocation, the per capita constraint becomes

$$c_1 + c_2 \leq y_1 + y_2$$

(b) $\{c_1, c_2\} \rightarrow$ Golden Rule Allocation: allocation that maximizes the utility of future generations.

Each chapter is largely self-contained whilst the comprehensive introduction provides an overview of the key statistical concepts and methods. All of the chapters include the essential references for each topic and provide a sound guide for further reading. Topics covered include unit roots, non-linearities and structural breaks, time aggregation, forecasting the Kalman filter, generalised method of moments, maximum likelihood and Bayesian estimation, vector autoregressive dynamic stochastic general equilibrium and dynamic panel models. Presenting the most important models and techniques for empirical research, this Handbook will appeal to students, researchers and academics working in empirical macro and econometrics. The American Economic Review, 1989 *Whitaker's Book List*, 1991 **New Developments in Time**

Series Econometrics Jean-Marie Dufour, Baldev Raj, 2012-12-06 This book contains eleven articles which provide empirical applications as well as theoretical extensions of some of the most exciting recent developments in time series econometrics. The papers are grouped around three broad themes: I the modeling of multivariate time series, II the analysis of structural change, III seasonality and fractional integration. Since these themes are closely inter-related, several other topics covered are also worth stressing: vector autoregressive VAR models, cointegration and error correction models, nonparametric methods in time series and fractionally integrated models. Researchers and students interested in macroeconomic and empirical finance will find in this collection a remarkably representative sample of recent work in this area. **Journal of Economic Literature**, 2001 **Creative Systems in Structural and Construction Engineering** Amarjit Singh, 2017-11-22 An examination of creative systems in structural and construction engineering taken from conference proceedings. European Economic Governance Willem Molle, 2011-03-01 In the course of its development the EU has had to deal with an expanding policy agenda covering ever more subjects and an increased diversity of instruments It has also had to deal with an increased number of member states and an extended range of partners regional authorities non governmental organisations These developments have greatly increased the risk of inconsistencies between the various policies pursued and between the various levels of competence for the same policy Inconsistent policies are less effective than they ought to be So they imply a welfare loss The EU has tried to cope with the challenge of consistency by adapting its governance Traditionally it uses mainly the regulatory method The effectiveness of this method has recently come into question So alternative methods are now favoured One is the financial method which implies more expenditure via the EU budget The other is coordination The application of both methods has certain advantages and disadvantages The problem for policy makers is then to determine the choice between the modes first and the optimal level of budgetary and coordination efforts next Notwithstanding its obvious policy relevance the problem has got little attention from academia This book sets out to contribute to a solution by following two approaches The first is a systematisation of the theoretical and conceptual underpinnings of the financial and coordination methods The second is an empirical investigation into a range of European policy processes implying to different degrees budgetary outlays and coordination
