**Math Instruction for Students with Learning Difficulties** Susan Perry Gurganus,2021-11-29 This richly updated third edition of Math  
Instruction for Students with Learning Difficulties presents a research based approach to mathematics instruction designed  
to build confidence and competence in preservice and inservice PreK 12 teachers Referencing benchmarks of both the  
National Council of Teachers of Mathematics and Common Core State Standards for Mathematics this essential text  
addresses teacher and student attitudes towards mathematics as well as language issues specific mathematics disabilities  
prior experiences and cognitive and metacognitive factors Chapters on assessment and instruction precede strands that  
focus on critical concepts Replete with suggestions for class activities and field extensions the new edition features current  
research across topics and an innovative thread throughout chapters and strands multi tiered systems of support as they  
apply to mathematics instruction [Linguistic Influences on Mathematical Cognition](#) Ann Dowker,Hans-Christoph  
Nuerk,2017-06-16 For many years an abstract amodal semantic magnitude representation largely independent of verbal  
linguistic representations has been viewed as the core numerical or mathematical representation This assumption has been  
substantially challenged in recent years Linguistic properties affect not only verbal representations of numbers but also  
numerical magnitude representation spatial magnitude representations calculation parity representation place value  
representation and even early number acquisition Thus we postulate that numerical and arithmetic processing are not fully  
independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of

linguistic processing we just suppose these functions are connected in the functioning brain So far much research about linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic meaning or existence of words Lexical The lexical composition of words in particular number words Visuo spatial orthographic Orthographic properties such as the writing reading direction of a language Phonological Phonological phonetic properties of languages Other language related skills Verbal working memory and other cognitive skills related to language representations We hope that this book provides a new and structured overview on the exciting influences of linguistic processing on numerical cognition at almost all levels of language processing

**Foundations for Functional Modeling of Technical Artefacts** Morten Lind, 2023-12-07 This monograph provides a new framework for modelling goals and functions of control systems It demonstrates how to use means end concepts and various aspects of action to describe the relations between the structure dispositions functions and goals of technical systems and with human action The author developed this approach as part of his research on Multilevel Flow Modelling MFM He based the framework on concepts of action and means end analysis drawing on existing theories from several areas of study including philosophical logic semiotics and phenomenological approaches to social science Here he applies it to three modeling situations related to the interaction of technical artefacts and humans One involves the relation between designer and artefact another the relation between technical artefact and its user and the third the relation between a natural object and its user All three are relevant for modelling complex automated processes interacting with human operators The book also discusses challenges when applying the foundations for modelling of technical artefacts Overall it provides a cross disciplinary integration of several fields of knowledge These disciplines include intelligent process control human machine interaction and process and automation design As a result researchers and graduate students in computer science engineering and philosophy of technology will find it a valuable resource
