United States. Congress. House. Science and Technology Committee,1975 Greening Industries and Creating Jobs Bela Galgoczi,2012 How the objective of a resource efficient low carbon economy is to be reached and how the transition is managed are the key issues addressed by this publication The two main focuses are industrial policy and employment prospects on the road to a green economy that retains its industrial base Any lasting recovery of the real economy will necessarily take the shape of a more resource efficient production model While we argue that only a more ambitious and comprehensive European climate policy framework would have a chance of delivering the broader 2050 climate targets this does not mean that Europe has to give up its industrial base and its related competences Several chapters of this book argue that the option of attaining a low carbon economy through deindustrialisation would prevent Europe from preserving its competitiveness and knowledge base which are also essential for exploiting the potential of the emerging eco industry While decoupling economic growth from resource use is also possible with an industrial base that is more energy and resource efficient this does require a fundamental shift in terms of how the economy is managed and how business decisions are made Sustainable industrial and structural policies are needed also in order to ensure that this revolutionary process takes place in a socially balanced manner *Towards the Re-Industrialization of Europe* Engelbert Westkämper,2013-08-04 Not only are European industries shrinking and experiencing diminishment of their capability to add value but Europe has lost more than a third of its GDP which had been primarily based on manufacturing and it suffers the consequences in high unemployment and weakened states finance This book is intended as a significant contribution to the on going European discussions after the economic crisis and the economic problems in many regions It is meant to enrich actual political dialogues for overcoming the crises by activating new potentials of high added value As such it seeks to provide the necessary orientation for enacting fundamental changes of business models and factory capabilities in order to meet the challenges of the global economy and minimizing environmental impacts It also opens perspectives for enterprise strategies and for further research topics Concrete recommendations are made for fields of action and future development

towards achieving a sustainable industrial sector in Europe Towards the Re Industrialization of Europe is based on megatrends societal challenges and objectives for factories development Focused on the realization of these goals by 2030 the treatise addresses four major topics of the European strategy in manufacturing manufacturing in the urban environment green manufacturing manufacturing in the value chain and manufacturing in the age of knowledge and communication One enabler of this strategic orientation is the implementation of holistic manufacturing systems which reflect manufacturing as a social technical system that has to be innovated optimized and adapted to the future requirements by implementation of enabling technologies and human skill The public infrastructure and reviving industries must also be able to support the strengthening of the economy through collaboration in research and education
