

Introduction

This document describes the basic hardware setup tasks for a factory-installed EMC VPLEX cluster at a customer site. Steps are included to install V30 and V30 VPLEX hardware.

Prerequisites

- Verify that you have the following documents:

- EMC Best Practice Guide for All Power Connections on the VPLEX Edge - Power requirements, including independent power feeds to all separate systems (included in Open Host Box)
- EMC All Power Configuration Worksheet - Power cabling identification (included in Open Host Box)
- EMC All Power Config and Setup Guide - Instructions to connect and secure the hardware to the data center (included in host box)

- Secure the equipment from dust and secure the equipment into the data center. The equipment requires the bare chassis in the following table before you apply power, to prevent malfunctions on VPLEX components.

Component/Configuration	Host location	For external power feed connections
Power VPLEX edge	Chassis	
100% to 100% (100% to 100%)	Chassis	
100% to 100% (100% to 100%)	Chassis	100% to 100% (100% to 100%)

- Confirm that the following customer-supplied cables are available:

- Single-line optical cables to connect all customer's I/O connections, with cable with enough additional length for independent cable availability and a maximum run each local cable
- Independent cable, to connect the VPLEX management wires to the network
- Two AC power cables from separate site power sources

- Review the following information, available on EMC Powerlink[®]:

- EMC VPLEX Site Preparation Guide, for electrical, mechanical, and cooling requirements
- EMC Single Support Matrix, for support information on VPLEX integration into the customer's storage environment
- Implementation and Planning Best Practice for EMC VPLEX Hardware Installation
- EMC VPLEX with Configuration Assistant Configuration Worksheet - Download for use during VPLEX setup

Procedure

- Remove the cable holder kit from the Open Host Box, and place it over the ports on the inside of the cabinet's rear door.

- V30 hardware only

- At the front of the cabinet, remove each engine's label, and confirm that the components shown in the following figure are secure.

- At the rear of the cabinet, push in each cable connector and the I/O module (EMC) connector to ensure they are fully seated. Insert the storage enclosures, push the components firmly in, and reinsert the screws. Verify that each EMC's latch function is on.

- V30 hardware only

- At the front of the cabinet, remove the I/O (I/O) cable front panel. Approximately, use the cable holder to the VPLEX connector, to ensure the highest correct loop. Then remove and disconnect the two I/O cables, remove them only for dropping that secure the loop to the I/O cable, and wrap the front panel back into place.

- Remove each engine's front panel. Then check the latch on all power supplies, and confirm that the components are secure. If the latch is not locked, replace the front panel.

- At the rear, check the latch on all modules, and confirm that the components are secure. Verify that each module is fully seated in its slot.

- V30 and V30 - Pull gently on each I/O on the I/O module, and to prevent them from becoming loose, to ensure that the I/Os are secure.

- At the I/O on host:

- Remove the spring latch.
- Push the I/O fully in.
- Close the spring latch.

- Verify each cable connection by pressing the cable connector into its port or receptacle. Check the AC power cable connections closely and confirm that any non-cable latches are positioned as shown in the following figure.

- Verify that the equipment is fully and located in the data center environment, as described in "Powerlink" step 2.

- Install EMC VPLEX power connections.

- Install EMC VPLEX I/O connections.

- Install EMC VPLEX I/O connections.

- Connect customer-supplied AC power cables from the VPLEX to site power as described in the EMC Best Practice Guide for All Power Connections on the VPLEX Edge.

- Install EMC VPLEX I/O connections.

- Complete the EMC All Power Configuration Worksheet. Then, add it to the host and place it over the ground on cabinet's rear door.

- Verify the I/O status on each I/O.

NOTE: The On-Battery LED stays on while the I/Os are fully charged. Refresh could be a time indicator of a low battery.

- Connect customer-supplied fiber optic cables from the front-end and back-end cables to the appropriate VPLEX I/O ports. Do not touch the end of any fiber optic cable, to avoid damage or contamination.

Use independent physical fiber channel links to connect each host to the VPLEX hardware in all or each host to the front-end storage. To prevent data unavailability, ensure that each host has a storage over two paths to at least two distinct in-cabinet, and that multipathing is configured to distribute the paths evenly between distinct in-cabinet and then each engine in-cabinet.

- Route the cables to the side of the cabinet as shown in the following figure. Do prevent blocking components. Maximum a maximum number of two cables for any feed in a three-channel cable. (In a V30 cabinet, route the cables along the cable management trays.) Route the cables up or down the side of the cabinet through the plastic cable holders, and not the top or bottom of the cabinet.

- Connect the management port to the customer IT network.

- VPLEX Edge[™] or VPLEX Edge[™] only - Connect the interconnect cables as shown in the figure that applies to your SAN/FCM connection. Ensure that each device has two independent paths to each device in the other cabinet (this connection is the same for each engine in a cluster).

- V30 hardware with I/O connections over Fiber Channel

- V30 hardware with I/O connections over IP

- V30 hardware with I/O connections over Fiber Channel

- V30 hardware with I/O connections over IP

Next steps

- Install and install the VPLEX Powerlink Connection from Powerlink to ensure additional system requirements, and troubleshooting information.
- Work with the customer to complete the EMC VPLEX with Configuration Assistant Configuration Worksheet, and give it to the customer.
- Follow the procedures in the EMC VPLEX with Configuration Assistant Configuration Guide to configure the cluster for operation in the customer environment.
