Spellman,1998-10-02 Make your environmental lab and lab technicians work practices the safest possible Protect workers from hazardous material they handle on site Protect the civilian population from harm in a hazardous materials emergency Prevent accidents before they happen The purpose of Safe Work Practices for the Environmental Laboratory is twofold 1 For the person designated as the laboratory s Chemical Hygiene Officer or Safety Officer this text is a user friendly reference that will provide a format a template a guide to compliance with OSHA s Laboratory Standard 29 CFR 1910 145 and 2 for the person who is assigned to work in the environmental laboratory this user friendly text provides the information needed not only to perform routine laboratory tasks correctly but also to perform them safely The environmental lab is involved with performing analytical testing and sampling protocols relating to air soil biosolids sludges drinking water wastewater groundwater stormwater waste characterization petroleum products and HRSD NPDES effluent studies Many wastewater treatment plants and water works have their own environmental laboratories

These labs primarily perform analysis of process conditions to ensure optimization of the process. However, even these small labs, a few are quite large, perform environmental sampling and therefore are environmental labs. The actual genesis of the environmental laboratory can be attributed to the environmental regulations that have been generated by USEPA, AOAC, ASTM, NIOSH, OSHA, and other regulatory and advisory entities. The typical environmental laboratory contains several different types of hazards the lab worker must guard against. This is the case even though modern environmental laboratories have been designed to take maximum advantage of engineering controls that work to engineer out most hazards. The main hazard discussed in this text has to do with hazardous materials, dangerous chemicals and compounds, and the effect they can have on work practices. OSHA is quite specific in regard to protecting the laboratory worker from harm that could result from handling hazardous materials; these specifics are discussed in detail throughout this text. It is important to point out that this text will provide the user with more than just a safety book. For example, this text provides the user with a sample Chemical Hygiene Plan; it discusses various safe work practices for standard operating procedures normally performed in the environmental laboratory and it discusses procedures to use for emergency response activities such as clean up of chemical spills. The bottom line is that probably the most important benefit to be derived from using this text is the exposure the user receives to the lessons and examples presented throughout the text; these lessons learned and examples provide information on how to make your environmental laboratory and the performance of your individual work practices safer. When you get right down to it, isn't this what a safety text should be all about?

Job Safety & Health, 1978 **Pandemic Influenza Preparedness and Response Guidance for Healthcare Workers and Healthcare Employers**, 2007 **Training Requirements in OSHA Standards and Training Guidelines** U.S. Department of Labor, Occupational Safety Administration, 2014-03-18

Many standards promulgated by the Occupational Safety and Health Administration (OSHA) explicitly require the employer to train employees in the safety and health aspects of their jobs. Other OSHA standards make it the employer's responsibility to limit certain job assignments to employees who are certified competent or qualified, meaning that they have had special previous training in or out of the workplace. The term designated personnel means selected or assigned by the employer or the employer's representative as being qualified to perform specific duties. These requirements reflect OSHA's belief that training is an essential part of every employer's safety and health program for protecting workers from injuries and illnesses. Many researchers conclude that those who are new on the job have a higher rate of accidents and injuries than more experienced workers. If ignorance of specific job hazards and of proper work practices is even partly to blame for this higher injury rate, then training will help to provide a solution. As an example of the trend in OSHA safety and health training requirements, the Process Safety Management of Highly Hazardous Chemicals standard, Title 29 Code of Federal Regulations Part 1910.119, contains several training requirements. This standard was promulgated under the requirements of the Clean Air Act Amendments of 1990. The Process Safety Management Standard

requires the employer to evaluate or verify that employees comprehend the training given to them. This means that the training to be given must have established goals and objectives regarding what is to be accomplished. Subsequent to the training, an evaluation would be conducted to verify that the employees understood the subjects presented or acquired the desired skills or knowledge. If the established goals and objectives of the training program were not achieved as expected, the employer then would revise the training program to make it more effective or conduct more frequent refresher training or some combination of these. The requirements of the Process Safety Management Standard follow the concepts embodied in the OSHA training guidelines contained in this booklet. The length and complexity of OSHA standards may make it difficult to find all the references to training. So to help employers, safety and health professionals, training directors and others with a need to know OSHA's training-related requirements have been excerpted and collected in this booklet. Requirements for posting information, warning signs, labels and the like are excluded, as are most references to the qualifications of people assigned to test workplace conditions or equipment. It is usually a good idea for the employer to keep a record of all safety and health training. Records can provide evidence of the employer's good faith and compliance with OSHA standards. Documentation can also supply an answer to one of the first questions an accident investigator will ask: Was the injured employee trained to do the job? Training in the proper performance of a job is time and money well spent, and the employer might regard it as an investment rather than an expense. An effective program of safety and health training for workers can result in fewer injuries and illnesses, better morale and lower insurance premiums among other benefits.

Going Back to School with District Worker's Compensation and Employee Safety Programs Diane K. Schweitzer PhD RN CSRM, 2013-09-07

When school administrators think of school safety, they frequently think of student safety and security. School district administrators need also to be concerned about the safety of all adult workers, including certified and classified employees, e.g., administrators, teachers, secretaries, custodians, foodservice workers, nurses, administrators, bus drivers, maintenance personnel and others. Losses from injuries to employees result in disruption of the educational process, lost days from work, increased insurance premiums and consequent loss of funding for core educational initiatives. Injuries can diminish in frequency and severity or be avoided almost entirely if administrators implement health and safety systems. The cost of providing medical care to injured employees establishes baseline data on which worker compensation premiums are assessed. Administrators could reinvest costs saved in workers compensation insurance premiums into educational programs for the direct benefit of students. A comprehensive safety system that confirms administration commitment to a safe working environment assures management commitment as a legal and ethical responsibility, promotes employee involvement, pinpoints and eliminates potential hazards and encourages employees to prevent potential harm to other employees, teaching staff and students. This text focuses on developing a successful workers compensation program and safety system for school district employees. The models and strategies may be adapted for use in school districts for reducing school injuries. School

district administrators are frequently forced to do more with less funding particularly considering the requirement to implement many unfunded mandates from state and federal governments Dollars saved from improved worker safety and reduction of insurance premiums may directly benefit educational initiatives in school districts Primarily the funds for educating students may originate from saved workers compensation dollars **Warehouse Safety** George
