Encyclopedia of Astrobiology Muriel Gargaud,William M. Irvine,Ricardo Amils,José Cernicharo Quintanilla,Henderson James Cleaves,Daniele Pinti,Daniel Rouan,Tilman Spohn,Stéphane Tirard,Michel Viso,2015-10-14 The interdisciplinary field of Astrobiology constitutes a joint arena where provocative discoveries are coalescing concerning e g the prevalence of exoplanets the diversity and hardiness of life and its increasingly likely chances for its emergence Biologists astrophysicists biochemists geoscientists and space scientists share this exciting mission of revealing the origin and commonality of life in the Universe The members of the different disciplines are used to their own terminology and technical language In the interdisciplinary environment many terms either have redundant meanings or are completely unfamiliar to members of other disciplines The Encyclopedia of Astrobiology serves as the key to a common understanding

Each new or experienced researcher and graduate student in adjacent fields of astrobiology will appreciate this reference work in the quest to understand the big picture The carefully selected group of active researchers contributing to this work and the expert field editors intend for their contributions from an internationally comprehensive perspective to accelerate the interdisciplinary advance of astrobiology This new edition offers 300 new entries Many entries were expanded or supplemented by figures supporting the understanding of the text Especially in the field of astrochemistry there is a huge body of new results that have been taken into account in this new edition The synonyms and keywords have been carefully revisited Many were added redundant ones deleted

When Biospheres Collide: A History of NASA's Planetary Protection Programs Michael Meltzer, 2012-01-27 PRINT FORMAT ONLY NOTE NO FURTHER DISCOUNT FOR THIS PRINT PRODUCT OVERSTOCK SALE Significantly reduced list price This new book from the NASA History Series tackles an interesting duo of biological problems that will be familiar to anybody who has seen photos of Apollo astronauts quarantined after their return to Earth Namely how do we avoid contaminating celestial bodies with Earthly germs when we send spacecraft to study these bodies and how do we avoid spreading foreign biological matter from space when our robotic and human spacefarers return to Earth Biological matter from an external system could potentially cause an unchecked epidemic either on Earth or in space

so strict precautions are necessary Each time a space vehicle visits another world it runs the risk of forever changing that extraterrestrial environment We are surrounded on Earth by a m lange of different microorganisms and if some of these hitchhike onboard a space mission they could contaminate and start colonies on a different planet Such an occurrence would irrevocably alter the nature of that world compromise all future scientific exploration of the body and possibly damage any extant life on it By inadvertently carrying exotic organisms back to Earth on our spacecraft we also risk the release of biohazardous materials into our own ecosystem Such concerns were recognized by scientists even before the 1957 launch of Sputnik This book presents the history of planetary protection by tracing the responses to the above concerns on NASA s missions to the Moon Mars Venus Jupiter Saturn and many smaller bodies of our solar system The book relates the extensive efforts put forth by NASA to plan operations and prepare space vehicles that return exemplary science without contaminating the biospheres of other worlds or our own To protect irreplaceable environments NASA has committed to conducting space exploration in a manner that is protective of the bodies visited as well as of our own planet

Life beyond Earth Athena Coustenis,Thérèse Encrenaz,2013-09-12 What is life and where can it exist What searches are being made to identify conditions for life on other worlds If extraterrestrial inhabited worlds are found how can we explore them In this book two leading astrophysicists provide an engaging account of where we stand in our quest for habitable environments in the Solar System and beyond Starting from basic concepts the narrative builds scientifically including more in depth material as boxed additions to the main text The authors recount fascinating recent discoveries from space missions and observations using ground based telescopes of possible life related artefacts in Martian meteorites extrasolar planets and subsurface oceans on Europa Titan and Enceladus They also provide a forward look to future missions This is an exciting informative read for anyone interested in the search for habitable and inhabited planets and an excellent primer for students in astrobiology habitability planetary science and astronomy
