Handbook of Research on Schools, Schooling and Human Development Judith L. Meece, Jacquelynne S. Eccles, 2010-06-10 Children spend more time in school than in any social institution outside the home And schools probably exert more influence on children s development and life chances than any environment beyond the home and neighbourhood The purpose of this book is to document some important ways schools influence children s development and to describe various models and methods for studying schooling effects Key features include Comprehensive Coverage this is the first book to provide a comprehensive review of what is known about schools as a context for human development Topical coverage ranges from theoretical foundations to investigative methodologies and from classroom level influences such as teacher student relations to broader influences such as school organization and educational policies Cross Disciplinary this volume brings together the divergent perspectives methods and findings of scholars from a variety of disciplines among them educational psychology developmental psychology school psychology social psychology psychiatry sociology and educational policy Chapter Structure to ensure continuity chapter authors describe 1 how schooling influences are conceptualized 2 identify their theoretical and methodological approaches 3 discuss the strengths and weaknesses of existing research and 4 highlight implications for future research practice and policy Methodologies chapters included in the text feature various methodologies including longitudinal studies hierarchical linear models experimental and quasi experimental designs and mixed methods

International Handbook of Mathematical Learning Difficulties Annemarie Fritz, Vitor Geraldi Haase, Pekka Räsänen, 2019-01-30 This comprehensive volume provides teachers researchers and education professionals with cutting edge knowledge developed in the last decades by the educational behavioural and neurosciences integrating cognitive developmental and socioeconomic approaches to deal with the problems children face in learning mathematics The neurocognitive mechanisms and the cognitive processes underlying acquisition of arithmetic abilities and their significance for education have been the subject of intense research in the last few decades but the most part of this research has been conducted in non applied settings and there s still a deep discrepancy between the level of scientific knowledge and its implementation into actual educational settings Now it s time to bring the results from the laboratory to the classroom Apart from bringing the theoretical discussions to educational settings the volume presents a wide range of methods for early detection of children with risks in mathematics learning and strategies to develop effective interventions based on innovative cognitive test instruments It also provides insights to translate research knowledge into public policies in order to address

socioeconomic issues And it does so from an international perspective dedicating a whole section to the cultural diversity of mathematics learning difficulties in different parts of the world All of this makes the International Handbook of Mathematical Learning Difficulties an essential tool for those involved in the daily struggle to prepare the future generations to succeed in the global knowledge society
