Describe some common disorders of the endocrine system?

Diabetes: Diabetes mellitus is a chronic disease that occurs when the body either does not produce enough insulin or cannot use the insulin it produces effectively. Insulin is a hormone that allows glucose to enter the cells of the body. Without enough insulin, glucose builds up in the blood, leading to various complications. There are two main types of diabetes: Type 1, where the body produces little to no insulin, and Type 2, where the body does not use insulin properly. Symptoms include frequent urination, increased thirst, and unexplained weight loss.

Hyperthyroidism: Hyperthyroidism is a condition where the thyroid gland produces too much thyroid hormone. This can lead to a variety of symptoms, including weight loss, rapid heartbeat, and increased sweating. It is often caused by an autoimmune reaction where the body's immune system attacks the thyroid gland.

Hypothyroidism: Hypothyroidism is a condition where the thyroid gland produces too little thyroid hormone. This can lead to symptoms such as weight gain, fatigue, and depression. It is often caused by an autoimmune reaction where the body's immune system attacks the thyroid gland.

Addison's Disease: Addison's disease is a rare condition where the adrenal glands do not produce enough of the hormones cortisol and aldosterone. This can lead to symptoms such as fatigue, weight loss, and low blood pressure. It is often caused by an autoimmune reaction where the body's immune system attacks the adrenal glands.

Cushing's syndrome: Cushing's syndrome is a condition where the body produces too much of the hormone cortisol. This can lead to symptoms such as weight gain, high blood pressure, and diabetes. It is often caused by a tumor on the adrenal gland or by the long-term use of corticosteroid medications.

Hashimoto's thyroiditis: Hashimoto's thyroiditis is an autoimmune disease in which the body's immune system attacks the thyroid gland, leading to hypothyroidism. Symptoms include fatigue, weight gain, and depression. It is often diagnosed through blood tests that show elevated levels of thyroid antibodies.

Essentials of Human Behavior Elizabeth D. Hutchison, 2016-08-11 *Essentials of Human Behavior* combines Elizabeth D. Hutchison's two volume *Dimensions of Human Behavior* to present a multidimensional framework for understanding human behavior. Integrating person, environment, and the life course, this best-selling text leverages its hallmark case studies and balanced breadth and depth of coverage to help readers apply theory and general social work knowledge to unique practice situations. Now in four color and available with an interactive eBook, the Second Edition features a streamlined organization, the latest research, and original SAGE video to provide the most engaging introduction available to human behavior.

Endocrine Evaluation Ian Ramsey, 2006 Middle School Life Science Judy Capra, 2000. Student activities provide the hands-on experiences that are so important for middle grade learners. They are used to introduce concepts, thus providing time for exploration. They are also used to reinforce concepts by providing students with opportunities to apply what they have learned. An activity consists of the following components: Introductory Paragraphs connect topics with previous lessons or to students' experiences; Focusing Questions provide the activity's purpose and encourage students to make decisions; Materials show reduced versions of worksheets and data pages; Procedures state group size, specifies the assignment, and emphasizes safety precautions; Analysis Questions encourage higher-level thinking, requiring students to interpret their data; Conclusions require that students bring closure to an activity based on actual, not predicted, results; Extension Activities are often interdisciplinary and encourage students to learn more through an activity or research project. The readings build on students' experiences and help them learn from the activities. Some of the components are the same as those in the activities. Subheadings provide reading clues. Illustrations reinforce and clarify the text. Analysis Questions range from being pure recall to fairly abstract. They require that students think about the concepts and may have students personalize or otherwise apply the concepts. Extension Activities provide opportunities for career exploration. Boxed Items often appear at the end of a lesson to extend the concepts it presents. Science Words is a listing of roots, prefixes, and suffixes that help students understand the terms used in this program. Thinking Like a Scientist summarizes how students learn science in this program. The comprehensive index lists the topics and terms that students may want to look up. For each technical term, a boldfaced entry shows where students can find its definition and the term used in context. The Power of the Adolescent Brain Thomas Armstrong, 2016-07-12. Moody, Reckless, Impractical, Insecure, Distracted. These are all words commonly used to describe adolescents. But what if we recast these traits in a positive light? Teens possess insight, passion, idealism, sensitivity, and creativity in abundance, all qualities that can make a significant positive contribution to society. In this thought-provoking book, Thomas Armstrong looks at the power and promise of the teenage brain from an empathetic, strength-based perspective and describes what middle and high school educators can do to make the most of their students' potential. Thoroughly grounded in current neuroscience research, the book explains what we know about how the adolescent brain works and

proposes eight essential instructional elements that will help students develop the ability to think make healthy choices regulate their emotions handle social conflict consolidate their identities and learn enough about the world to move into adulthood with dignity and grace Armstrong provides practical strategies and real life examples from schools that illustrate these eight key practices in action In addition you ll find a glossary of brain terms a selection of brain friendly lesson plans across the content areas and a list of resources to support and extend the book s ideas and practices There is a colossal mismatch between how the adolescent brain has evolved over the millennia and the passive rote learning experiences that are all too common in today s test obsessed educational climate See the amazing difference in school and beyond when you use the insights from this book to help students tap into the power of their changing brains

Assessing Health-related Quality of Life of Children Pei Wang,Shunping Li,Jing Wu,Nan Luo,2024-02-20 Assessing health related quality of life HRQOL of Children has been a popular topic in recent years worldwide However there are several issues gaps in this research area which need to be addressed For instance previous studies on HRQOL of Children populations have normally used HRQOL instruments designed for adults These measurements may not be suitable for children as they are in a series of cognitive developmental stages and have different perspectives towards the relative importance of HRQOL dimensions In order to tackle this issue and to accurately measure children s HRQOL a set of dedicated HRQOL instruments should be first developed and validated The validated instruments could then be applied to the population measuring their HRQOL In addition the HRQOL information collected could be translated into health utility score if it is measured by utility instruments e g EQ 5D Y for the population Moreover the relevant studies on these issues is still lacking especially in non western countries
