sustainability was synonymous with the pursuit of eco efficiency and win win opportunities The notion of eco efficiency gives us the illusion that we can achieve environmental sustainability without having to question the pursuit of never ending economic growth The win win paradigm is meant to assure us that companies can be protectors of the environment whilst also being profit maximizers It is abundantly clear that the state of the natural environment has further degraded instead of improved This book introduces a new paradigm designed to finally reconcile business and the environment It is called net green which means that in these times of ecological overshoot businesses need to reduce total environmental impact and not just improve the eco efficiency of their products The book also introduces and explains the four pollution prevention principles again different less and labor not materials Together net green and the four pollution prevention principles provide a road map for businesses and for every household to a world in which human prosperity and a healthy environment are no longer at odds The Business of Less is full of anecdotes and examples This brings its material to life and makes the book not only very accessible but also hugely applicable for everyone who is worried about the fate of our planet and is looking for answers

Energy Systems: A Very Short Introduction Nick Jenkins, 2019-11-28 Modern societies require energy systems to provide energy for cooking heating transport and materials processing as well as for electricity generation Energy systems include the primary fuel its conversion and transport to the point of use In many cases this primary fuel is still a fossil fuel a one use resource derived from a finite supply within our planet causing considerable damage to the environment After 300 years of increasing reliance on fossil fuels particularly coal it is becoming ever clearer that the present energy systems need to change In this Very Short Introduction Nick Jenkins explores our historic investment in the exploitation of fossil energy resources and their current importance and discusses the implications of our increasing rate of energy use He considers the widespread acceptance by scientists and policy makers that our energy systems must reduce emissions of CO₂ and other greenhouse gases and looks forward to the radical changes in fuel technology that will be necessary to continue to provide energy supplies in a sustainable manner and extend access across the developing world Considering the impact of changing to an environmentally benign and low carbon energy system Jenkins also looks at future low carbon energy systems which would use electricity from a variety of renewable energy sources as well as the role of nuclear power in our energy use
