International Handbook of Research in History, Philosophy and Science Teaching Michael R. Matthews,2014-07-03 This inaugural handbook documents the distinctive research field that utilizes history and philosophy in investigation of theoretical curricular and pedagogical issues in the teaching of science and mathematics It is contributed to by 130 researchers from 30 countries it provides a logically structured fully referenced guide to the ways in which science and mathematics education is informed by the history and philosophy of these disciplines as well as by the philosophy of education more generally The first handbook to cover the field it lays down a much needed marker of progress to date and provides a platform for informed and coherent future analysis and research of the subject The publication comes at a time of heightened worldwide concern over the standard of science and mathematics education attended by fierce debate over how best to reform curricula and enliven student engagement in the subjects There is a growing recognition among educators and policy makers that the learning of science must dovetail with learning about science this handbook is uniquely positioned as a locus for the discussion The handbook features sections on pedagogical theoretical national and biographical research setting the literature of each tradition in its historical context It reminds readers at a crucial juncture that there has been a long and rich tradition of historical and philosophical engagements with science and mathematics teaching and that lessons can be learnt from these engagements for the resolution of current theoretical curricular and pedagogical questions that face

discussion of the theoretical background of a specific imaginative approach e.g. storytelling, wonder, full science reviews the existing empirical evidence regarding its role in the learning process and points out its implications for pedagogy and instructional practices. Examples from physical science illustrating its implementation in the classroom are also discussed. In distinguishing between participation in a science activity and engagement with science ideas per se, the book emphasizes the central role of imaginative engagement with science content knowledge and thus the potential of the recommended imaginative approaches to attract students to the world of science.

A Few of Our Favorite Things Patricia D. Morrell, Kate Popejoy, 2014-11-04. We are all familiar with the expression "teacher's bag of tricks." It is fairly easy for K-12 teachers to do a quick web search, scan library shelves, and browse through journals to provide them with numerous lessons and ideas to keep their bags filled. Science teacher educators need to not only provide preservice teachers with resources to help them fill their bags but also include crucial theory and pedagogy: what constitutes minds on lessons, not merely hands-on activities. But where do we, science methods instructors, find ideas to put in our bag of tricks to help us with the pedagogy we teach and model? These kinds of teaching ideas are not so easy to find using the internet or even science methods textbooks. This book is a collection of some favorite teaching ideas from science teacher educators from across the United States and abroad. This book is NOT a collection of teaching ideas about specific science content. This book IS a set of activities that help us prepare our preservice science teachers in the areas of Constructivism, Conceptual Change, Nature of Science, Integration including Technology Integration, Scientific Inquiry, Engineering Design, and Diversity Differentiation. Each section starts with a brief overview of the topic and an introduction to the activities included on the theme. The individual activities include step-by-step instructions, modifications, extensions, references, and additional readings to help you easily and fully implement the idea in your own classroom. These ideas are a few of our favorites; we hope they will become some of yours as well.

Two Cheers for Higher Education Steven Brint, 2019-01-08. A leading expert challenges the prevailing gloomy outlook on higher education with solid evidence of its successes. Crushing student debt rapidly eroding state funding, faculty embroiled in speech controversies, a higher education market disrupted by online competition: today's headlines suggest that universities' power to advance knowledge and shape American society is rapidly declining. But Steven Brint, a renowned analyst of academic institutions, has tracked numerous trends demonstrating their vitality. After a recent period that witnessed soaring student enrollment and ample research funding, universities, he argues, are in a better position than ever before. Focusing on the years 1980-2015, Brint details the trajectory of American universities, which was influenced by evolving standards of disciplinary professionalism, market-driven partnerships, especially with scientific and technological

innovators outside the academy and the goal of social inclusion. Conflicts arose: academic entrepreneurs, for example, flouted their campus responsibilities and departments faced backlash over the hiring of scholars with nontraditional research agendas. Nevertheless, educators' commitments to technological innovation and social diversity prevailed and created a new dynamism. Brint documents these successes along with the challenges that result from rapid change. Today, knowledge-driven industries generate almost half of U.S. GDP, but divisions by educational level split the American political order. Students flock increasingly to fields connected to the power centers of American life and steer away from the liberal arts. And opportunities for economic mobility are expanding even as academic expectations decline. In describing how universities can meet such challenges head-on, especially in improving classroom learning, Brint offers not only a clear-eyed perspective on the current state of American higher education but also a pragmatically optimistic vision for the future.
