Ammerman, Michel Hersen, 2013-11-11 This book could not have been conceptualized or published 20 years ago Indeed it is doubtful that we could have organized the material for this handbook 10 years ago Over the last 20 years however the painstaking efforts of many clinical researchers working with a variety of resistive psychopathologies have resulted in specific psychotherapies and pharmacotherapies that are effective with a significant proportion of patients at least for some of the disorders Much clinical research remains to be carried out in the forthcoming decades But now that we are nearing the 21st century at least some statement about efficacy can be made In 1967 Gordon Paul succinctly stated that the ultimate goal of treatment outcome research is to determine What treatment by whom is most effective for this individual with that specific problem and under which set of circumstances p 111 At that time empirical evaluations of psychosocial and pharmacologic treatments were few and far between Methodological strategies for determining treatment effectiveness were also in the formative stage as exemplified by introduction of control groups that received inactive interventions i e placebo and the relatively recent practice of comparing two or more treatments in addition to placebo In the almost three decades since Paul s oft quoted dictum both the quantity and the quality of treatment outcome research with adults have increased dramatically **Zosen** ,1983 Traumatic Stress Bessel A. task we asked our colleagues who are experts in their respective areas to share their current thinking with us and with you the readers. Thus many theoretical viewpoints are represented with none having a monopoly over the others. This is as it should be given the data collected by clinical researchers at this time. We have also attempted to capture the excitement that has permeated the field in the past 30 years or so.
