help them build reports from scratch For this programmer I wrote 13 chapters which teach you everything about adding reports to ASP NET and Windows applications It starts with the basics of building reports to adding charts crosstab reports sorting and grouping subreports and using the formula editor with Basic syntax and Crystal syntax The second type of programmer has been using Crystal Reports for years and is mostly concerned with how to do technical runtime customization of reports For this programmer I researched and diagrammed the undocumented report object models I included dozens of examples in both VB NET and C to show you how to modify reports manipulate different data sources XML ADO NET ODBC OLE DB stored procedures with parameters modify formulas and report parameters and integrate NET with the RAS and RDC The dozens of emails I received when the book was online were instrumental for doing a major revision of many chapters before publishing the book in hardcopy format Since releasing the book I continue to receive more emails from people They regret that the free book isn't online anymore but understand that it couldn't last forever and that the hardcopy version is even better I hope you like it and that it helps you achieve your reporting goals September 2004 Update Due to high demand I did a second printing of the book I took advantage of this opportunity to go through the book and remove all grammatical errors The content is the same but the typos have been corrected
