Developing a Neo-Peircean Approach to Signs Tony Jappy, 2023-12-14 This book takes up a number of Charles Sanders

Peirce's undeveloped semiotic concepts and highlights their theoretical interest for a general semiotics. Peirce's career as a logician spanned almost half a century during which time he produced several increasingly complex sign systems. The best known from 1903 defined amongst other things a signifying process involving sign, object and interpretant, the universally known icon-index-symbol division and a set of 10 distinct classes of signs. Peirce subsequently expanded this process to include 2 objects of the sign and 3 interpretants. Uncoincidentally in the 5 years between 1903 and the final system of 1908 he introduced a number of highly innovative semiotic concepts which he never developed. One such concept is hypoiconicity which comprises 3 levels of isomorphism holding between sign and object and in spite of the mutations these varieties of icon subsequently underwent offers qualitative analysis as a complement to the traditional literal-figurative binarism in the discussion of verbal and nonverbal signs. Another is semiosis which Peirce introduced and defined in 1907 but only rarely illustrated. Involving a complex combination of object, perception, interpretation and a medium, this is shown to be a far more complex signifying process than the one implicit in the three-correlate definition of the sign of 1903. Exploring the evolving theoretical background to the emergence of these new concepts and showing how they differ from certain contemporary conceptions of sign, mind and signification, the book proposes an introduction to and explanations and illustrations of these important developments.
