Heaven on Earth L. S. Fauber, 2019-12-03 Before the invention of the telescope people used nothing more than their naked eye to fathom what took place in the visible sky So how did four men in the 1500 s though of different nationality age religion and class collaborate to discover that the Earth revolved around the Sun With this radical discovery that went against the Catholic Church they created our contemporary world and with it the uneasy conditions of modern life Heaven on Earth is an intimate examination of a scientific family that of Nicolaus Copernicus Tycho Brahe Johannes Kepler and Galileo Galilei Fauber juxtaposes their work with insight into their personal lives and and political considerations which in turn shaped their pursuit of knowledge Uniquely he shows how their intergenerational collaboration was actually what made the scientific revolution possible Contrary to the competitive nature of research today collaboration was key to early discoveries These men related to one another via intellectual pursuit rather than blood calling each other brothers fathers and sons Filled with rich characters and sweeping history Heaven on Earth reveals how the connection between these pillars of intellectual history moved science forward and helped usherd the world into modernity

Foundations for the Future in Mathematics Education Richard A. Lesh, Eric Hamilton, James J. Kaput, 2020-10-07 The central question addressed in Foundations for the Future in Mathematics Education is this What kind of understandings and abilities should be emphasized to decrease mismatches between the narrow band of mathematical understandings and abilities that are emphasized in mathematics classrooms and tests and those that are needed for success beyond school in the 21st century This is an urgent question In fields ranging from aeronautical engineering to agriculture and from biotechnologies to business administration outside advisors to future oriented university programs increasingly emphasize the fact that beyond school the nature of problem solving activities has changed dramatically during the past twenty years as powerful tools for computation conceptualization and communication have led to fundamental changes in the levels and types of mathematical understandings and abilities that are needed for success in such fields For K 12 students and teachers questions about the changing nature of mathematics and mathematical thinking beyond school might be rephrased to ask If the goal is to create a mathematics curriculum that will be adequate to prepare students for informed citizenship as well as preparing them for career opportunities in learning organizations in knowledge economies in an age of increasing globalization how should traditional conceptions of the 3Rs be extended or reconceived Overall this book suggests that it is not enough to simply make incremental changes in the existing curriculum whose traditions developed out of the needs of industrial societies The authors beyond simply stating conclusions from their research use results from it to describe promising directions for a research agenda related to this question The volume is organized in three sections Part I focuses on naturalistic observations

aimed at clarifying what kind of mathematical thinking people really do when they are engaged in real life problem solving or decision making situations beyond school Part II shifts attention toward changes that have occurred in kinds of elementary but powerful mathematical concepts topics and tools that have evolved recently and that could replace past notions of basics by providing new foundations for the future This section also initiates discussions about what it means to understand the preceding ideas and abilities Part III extends these discussions about meaning and understanding and emphasizes teaching experiments aimed at investigating how instructional activities can be designed to facilitate the development of the preceding ideas and abilities Foundations for the Future in Mathematics Education is an essential reference for researchers curriculum developers assessment experts and teacher educators across the fields of mathematics and science education
