You might think the problem is your brain. It seems to have a mind of its own, a mind that doesn't always want to take in the dry technical stuff you're forced to study. The fact is your brain craves novelty. It's constantly searching, scanning, waiting for something unusual to happen. After all, that's the way it was built to help you stay alive. It takes all the routine, ordinary, dull stuff and filters it to the background so it won't interfere with your brain's real work: recording things that matter. How does your brain know what matters? This Java Book is very serious Java stuff. A complete introduction to Java. You'll learn everything from the fundamentals to advanced topics. If you've read this book, you know what to expect: a visually rich format designed for the way your brain works. To use this book does not require any previous programming experience. However, if you come from a C/C++ background, then you will be able to advance a bit more rapidly. As most readers will know, Java is similar in form and spirit to C/C++. Thus, knowledge of those languages helps but is not necessary. Even if you have never programmed before, you can learn to program in Java using this book.
