Validating Technological Innovation David Coniam, Peter Falvey, 2016-04-02 This book discusses Hong Kong's use of onscreen marking OSM in public examinations. Given that Hong Kong leads the way in OSM innovation, this book has arisen from a recognised need to provide a comprehensive coherent account of the findings of various separate but linked validation studies of onscreen public examinations in Hong Kong. The authors discuss their experience of the validation process, demonstrating how high stakes innovation should be fully validated by a series of research studies in order to satisfy key stakeholders. Information and Communication Technologies in Education, Research, and Industrial Applications Vadim

Ermolayev, Heinrich C. Mayr, Mykola Nikitchenko, Aleksander Spivakovsky, Grygoriy Zholtkevych, 2013-12-12 This book constitutes the thoroughly refereed proceedings of the 9th International Conference on Information and Communication Technologies in Education Research and Industrial Applications held in Kherson, Ukraine, in June 2013. The 18 revised full papers presented were carefully reviewed and selected from 125 submissions. The papers are organized in topical sections on systems infrastructures and integration semantics, knowledge engineering and management, ICT in teaching methodologies and didactics, model driven software development and verification.

The Routledge Handbook on Cities of the Global South Susan Parnell, Sophie Oldfield, 2014-03-26 The renaissance in urban theory draws directly from a fresh focus on the neglected realities of cities beyond the west and embraces the global south as the epicentre of urbanism. This Handbook engages the complex ways in which cities of the global south and the global north are rapidly shifting the imperative for multiple genealogies of knowledge production as well as a diversity of empirical entry points to understand contemporary urban dynamics. The Handbook works towards a geographical realignment in urban studies, bringing into conversation a wide array of cities across the global south, the ordinary, mega, global and peripheral. With interdisciplinary contributions from a range of leading international experts, it profiles an emergent and geographically diverse body of work. The contributions draw on conflicting and divergent debates to open up discussion on the meaning of the city in or of the global south, arguments that are fluid and increasingly contested geographically and conceptually. It reflects on critical urbanism, the macro and micro scale forces that shape cities, including ideological, demographic and technological shifts, and constantly changing global and regional economic dynamics. Working with southern reference points, the chapters present themes in urban politics, identity and environment in ways that re-frame our thinking about cities. The Handbook engages the twenty-first century city through a southern urban lens to stimulate scholarly, professional and activist engagements with the city.

Advances in Fluid-Structure Interaction Marianna Braza, Alessandro Bottaro, Mark Thompson, 2016-04-07 This book addresses flow separation within the context of fluid-structure interaction phenomena. Here, new findings from two research communities focusing on fluids and structures are brought together, emphasizing the importance of a unified multidisciplinary approach. The book covers the theory, experimental findings, numerical simulations and modeling in fluid

dynamics and structural mechanics for both incompressible and compressible separated unsteady flows There is a focus on the morphing of lifting structures in order to increase their aerodynamic and or hydrodynamic performances to control separation and to reduce noise as well as to inspire the design of novel structures The different chapters are based on contributions presented at the ERCOFTAC Symposium on Unsteady Separation in Fluid Structure Interaction held in Mykonos Greece 17-21 June 2013 and include extended discussions and new highlights The book is intended for students researchers and practitioners in the broad field of computational fluid dynamics and computational structural mechanics It aims at supporting them while dealing with practical issues such as developing control strategies for unsteady separation and applying smart materials and biomimetic approaches for design and control

Deep Learning for Marine Science Haiyong Zheng, Mark C. Benfield, Hongsheng Bi, Xuemin Cheng, 2024-05-15 Deep learning DL mainly composed of deep and complex neural networks such as recurrent network and convolutional network is an emerging research branch in the field of artificial intelligence and machine learning DL revolution has a far reaching impact on all scientific disciplines and every corner of our lives With continuing technological advances marine science is entering into the big data era with the exponential growth of information DL is an effective means of harnessing the power of big data Combined with unprecedented data from cameras acoustic recorders satellite remote sensing and large model outputs DL enables scientists to solve complex problems in biology ecosystems climate energy as well as physical and chemical interactions Although DL has made great strides it is still only beginning to emerge in many fields of marine science especially towards representative applications and best practices for the automatic analysis of marine organisms and marine environments DL in nowadays marine science mainly leverages cutting edge techniques of deep neural networks and massive data which collected by in situ optical or acoustic imaging sensors for underwater applications such as plankton classification and coral reef detection This research topic aims to expand the applications of marine science to cover all aspects of detection classification segmentation localization and density estimation of marine objects organisms and phenomena
