Robot Play for All Andrea Bonarini, Serenella Besio, 2022-11-03 This book presents a comprehensive guide to the design of playing robots and the related play experiences Play is a natural activity for building and improving abilities and it reveals important particularly for persons with disabilities Many social physical and cultural factors may hinder children with disabilities from fully enjoying play as their peers Autonomous robots with specific characteristics can enhance the ludic experience having implications for the character of the play and presenting opportunities related to autonomy and physical movement the very nature of robots Their introduction into play thus provides everybody and in particular persons with disabilities new possibilities for developing abilities improving general status participating in social contexts as well as supporting professionals in monitoring progress This book presents a framework for the design of playful activities with robots developed over 20 years experience at AIRLab POLIMI Part 1 introduces the play concepts and characteristics and research results about play of children with different kinds of impairments Part 2 focuses on implementing robots able to play The design of playful activities is discussed as well as the necessary characteristics for them to be useful in both general play and activities involving disability related limitations In Part 3 the defined framework is used to analyze possibilities involving robots available on the toy market robots developed at research labs and robots to be developed in the next future The aim of the book is to give developers caregivers and users a set of methodological tools for selecting exploring and designing inclusive play activities where robots play a central role

Genetics and Epigenetics of Psychiatric Diseases, 2nd Edition Cunyou Zhao, Weihua Yue, Zhexing Wen, 2020-10-09 Psychiatric diseases have a highly complex etiology aggregating in families but not segregating in a traditional Mendelian manner Recent approaches to understanding the causes of psychiatric disease have focused on describing the genetic contribution to major psychiatric illnesses the use of large scale genome wide association studies GWAS and exome sequencing has enabled a systematic exploration of genetic risk factors and identified over 100 independent genomic loci significantly associated with psychiatric diseases however there remains uncertainty about the causal genes involved in disease pathogenesis and how their function is regulated Since many GWAS variants reside in non coding regions the disease associated common variants might be enriched in regulatory domains including enhancers and regions of active chromatin state These lead us to focus on the possible role of non sequence based genomic variation in health and disease Of particular interest are epigenetic modifications that regulate gene expression through modifications to DNA RNA histone proteins and chromatin The availability of high throughput profiling methods for quantifying epigenomic modifications in large numbers of samples has enabled us to perform epigenome wide association studies EWAS aimed at screening methylomic variations associated with environmental exposure and disease Thus systematic integration of genetic epigenetic and epidemiological approaches will contribute to improving our understanding of the molecular mechanisms underlying disease phenotypes

STAR Program Manual Joel R. Arick, Lauren Loos, Ruth

Falco,David A. Krug,2015-05-05 **The JASPER Model for Children with Autism** Connie Kasari,Amanda C. Gulsrud,Stephanie Y.
