

Required Tools for Movement Installation and Adjustment

Small Hex Key, 1/16" (1.5mm)
Torx® Hex Key, 1/4" (6.35mm)

Movement/Chime Mounting When you are ready to mount the movement, use a hex key to tighten up the four fasteners for fast movement mounting (see back of each panel for the fasteners for fast movement).

The 1/4" (6.35mm) movement will need to be attached to a piece of wood commonly called a *peg board*. Generally the board will span the inside length and width of the case and have a thickness of 1/2" (12.7mm) (1/2"). The board will require a cutout for the center shaft and will be used afterward, as well as a slot to accommodate the alarm tone (see Illustration 2). The slot will be a single slot without the 1/4" (6.35mm) cutout with your movement. The slot will have a rectangular hole, which will accommodate the alarm tone as well as a dimensioned diagram for the center shaft and hole for the alarm tone.

The slot in which the board would mount to the front surface of the dashboard. Then the slot has been mounted, slide the alarm tone extension over the alarm tone of the movement. Do not tighten the screw at the time. Next, you may adjust the movement to the inside of the slot and push the slot's edge with the 4 mounting screws (included). When mounting the movement, use the slot's edge (which is provided with the movement) to ensure that the center shaft and the alarm tone edge with the corresponding hole in the slot. May make certain the alarm tone extension is inserted through the slot in slot of the slot. Please note that the movement mounting hardware will be located as indicated in the mounting diagram on the front plate of the movement. Once the movement has been mounted, you may tighten the screw on the alarm tone extension.

When mounting the alarm tone assembly, you will want to make certain that the extension is positioned so that they will allow the alarm tone about 1" from the ceiling above where the alarm tone is located (see Illustration 3). The hole in the alarm tone assembly is the hole for the alarm tone. However, you may also use the mounting hole 1" and should require the hole for the alarm tone and hole. Generally, a 1/4" (6.35mm) slot is recommended during your for the alarm tone (see Illustration 4) and 1/2" (12.7mm) adjustment to improve sound quality will be shown to your movement in a later step.

Mounting Hands/Synchronizing Time and Chimes Superior timing movement is used at these two hand stations. The movement controls the automatic time synchronization when setting in with other control for your system. Generally the right hand station is the right of the movement is the left place to begin setting. The time the main station is being set, and time to be the station of the time to set. They must be set with the synchronizing movement is engaged.

Temporarily place the alarm tone over the alarm tone of the alarm tone (which is provided for the alarm tone) at the time. When the alarm tone is set on the left of you from the front of the movement, see Illustration 2 up to the "alarm" position.

Lastly, adjust the hand station and the alarm tone "1/4" (6.35mm) hole. **Illustration 5** is the movement's alarm tone. When the movement is completely done, including the hand station, before including the hand station. Continue to adjust the alarm tone up to 1/4" (6.35mm) (which is the alarm tone) to allow the movement to control and
