Apprentice

Nation Ryan Craig, 2023-11-07 College isn't for everyone. It's time to challenge the status quo and embrace the potential of apprenticeships in tech, healthcare, finance, and more, which can provide a sustainable pathway to economic opportunity. For decades, college has been the only respectable way to access the world of work despite paralyzing tuition and a dire lack of practical skills that has left 40 percent of college graduates underemployed, unfulfilled, and struggling to repay student loan debt. Education and workforce expert Ryan Craig explores how a modern apprenticeship system will allow students and job seekers to jump start their careers by learning while they earn, ultimately leading to greater workforce diversity and geographic mobility. With a deep dive into the history behind America's outdated college system, Craig reveals the origins of the student debt crises and admissions scandals. Why apprenticeships are an effective pathway to career opportunity. What America can do to catch up with other nations making apprenticeship opportunities broadly available. Where students and job seekers can go to land an apprenticeship. Featuring a directory of US apprenticeship programs by industry and location. *Apprentice Nation* is an accessible blueprint for a country where young Americans of all backgrounds can launch careers in a variety of in-demand fields. With just a few common sense changes to education and workforce development, an apprentice nation will put the American Dream within reach for everyone. *10 Years of Inflammation Pharmacology* Paola

Patrignani, Dieter Steinhilber, 2020-07-07 The past and future of inflammatory pharmacology research, a hot topic in health and disease. Inflammation is a physiological response to a traumatic injury, bacterial or viral infection. However, if not appropriately controlled, it contributes to a long list of diseases including asthma, atherosclerosis, multiple sclerosis, arthritis, and cancer. Different are the types of inflammatory responses. Acute inflammation is an immediate body response to the cellular damage induced by pathogens, noxious stimuli, or physical injury; it is a short-term response resulting in healing via time-dependent changes of leukocyte functions. First, a leukocyte infiltration happens within the damaged region with the purpose of eliminating the stimulus and repairing the tissue. Chronic inflammation, by contrast, is a prolonged and dysregulated response where the active inflammation contributes both to tissue destruction and to the development of many chronic human conditions and diseases. In the context of exaggerated inflammation, which occurs as a consequence of severe burns or trauma, the body response called sepsis can be associated with a fatal outcome. Increased knowledge of the cellular and molecular mechanisms taking part in the different types of inflammation is a central requirement to develop more effective and safer treatments. This is a necessary step to prevent potential severe consequences, i.e., organ failure associated with tissue fibrosis. The mission of the Inflammation Pharmacology section of *Frontiers in Pharmacology* is to publish scientifically sound studies that advance our knowledge on different aspects of inflammation and contribute to the development of more effective and safer anti-inflammatory agents. Within the present eBook are collected the top articles published in the Inflammation Pharmacology section in the last 10 years. Some articles explored the roles played by different lipid mediators generated from arachidonic acid, including leukotrienes and prostanoids such as prostacyclin and

prostaglandin PG F2a in inflammatory conditions Moreover the protectin PD family of specialized pro resolving mediators biosynthesized from the two omega 3 polyunsaturated fatty acids docosahexaenoic acid DHA and n 3 docosapentaenoic acid n 3 DPA were described for their biological effects the G coupled protein receptors pharmacology biosynthesis and medicinal chemistry Some other articles focused on the development of novel strategies to counteract inflammation or to induce its resolution The current concepts and controversies on classification pathogenesis and clinical management of cutaneous adverse events induced by biologic agents used in the treatment of rheumatologic conditions were discussed in another article The whole exome and whole genome sequencing data identifying new and old loci associated with atherosclerosis will lead to discovering new molecular targets for blocking atherosclerosis even in its early stages This critical issue was reviewed in another paper Numerous information on an individual clinical condition is held in their platelet derived microparticles MPs the assessment of their number and size together with their content can represent the signature to acquire diagnostic information and to monitor the efficacy of therapeutic agents Some other articles discussed the role of fibroblasts in the development of fibrosis and potential therapies under investigation It was enlightened the role of the activation and transdifferentiation of hepatic stellate cells HSCs into contractile matrix producing myofibroblasts MFBs as central events in hepatic fibrogenesis and summarized the current strategies for targeted delivery of drugs to pro fibrogenic liver cells including the development of therapeutics specifically targeting HSCs Continued in eBook

This volume employs a multidisciplinary approach to research on a high profile topic very much on the agenda of state and national policy leaders early childhood development and education It aims to reflect how scholarly perspectives shape the contours of knowledge generation and to illuminate the gaps that prevent productive interchange among scholars who value equity in the opportunities available to young children their families and teachers caregivers The editors and authors identify and prioritize critical research areas assess the state of the field in terms of promising research designs and methodologies and identify capacity building needs and potential cross group collaborations *Surviving Job Loss* Kenneth A.

Root, Rosemarie J. Park, 2016-02-11 Root and Park examine the plight of workers displaced from two paper mills and their paths to reemployment retirement decisions and the personal struggles they faced as a result of their dislocations They provide insightful personal portraits of workers that are representative of the hundreds who lost their jobs as a result of two mill closings one in Sartell Minnesota and the other in Bucksport Maine In addition the authors describe the types of

assistance that were offered to the workers displaced by the mill closings dedicate a chapter each to the plights of female workers and of spouses who were both displaced by the closings discuss the importance of community when economic displacement occurs compare the experience of a mill closing in Canada with the Maine and Minnesota closings and conclude with ways that society can be more proactive in assisting workers who suffer job displacement and the economic and psychological impacts that so often occur as a result Overall this book adds a human perspective to the problems facing dislocated workers not only in the shrinking paper industry but also in other contracting industries in the United States

Maloney,Jere Confrey,Kenny H. Nguyen,2014-06-01 The driving forces behind mathematics learning trajectories is the need to understand how children actually learn and make sense of mathematics how they progress from prior knowledge through intermediate understandings to the mathematics target understandings and how to use these insights to improve instruction and student learning In this book readers will come to understand what learning trajectories are the research and methodology that are necessary for developing them and gain insight into potential applications of learning trajectories A synthesis and research outcome in their own right learning trajectories provide detailed description of instructionally grounded development of mathematical concepts and reasoning from the perspective of student learning and overall building on decades of accumulated experience in mathematics education research However their greater importance may lie in their potential as frameworks that contribute an unprecedented coherence across classroom instruction professional development standards and assessment by focusing squarely on conceptual understanding and reasoning instead of assessment driven procedural knowledge This potential was sufficiently compelling as an organizing framework to have been cited as a basis for the Common Core mathematics standards the new mathematics learning expectations that are now consistent across most of the United States Among the conference attendees were the writers of the Common Core State Standards for Mathematics at the beginning of the Standards drafting process This book is an outgrowth of a conference on learning trajectories hosted in 2009 at North Carolina State University which examined research on learning trajectories An overarching message of the chapters in this volume is that learning trajectories by focusing on how children s mathematical reasoning develops are coming into their own as a rigorous underpinning for both instruction and accountability Some of the learning scientists featured in this volume have played major roles learning trajectories evolution from small scale day to day conjectures by individual teachers to systematic research endeavors that teachers and scientists alike can use to interpret standards plan instruction and formatively assess student work The work in this volume will be of interest to mathematics educators teachers and professional development specialists
