Secondary Education (Scotland) Great Britain. Scottish Education Department,1907 Bahamian Students'
Experiences with Mathematics in American Universities and Colleges Nikki Rochelle Cleare,2011 This longitudinal
 qualitative multi case study examines the mathematical experiences of three Bahamian students pursuing science degrees in
 American universities and its relationship to their previous mathematical experiences in their Bahamian high schools
 Drawing on cultural psychology and sociocultural theories of learning this study found that the relationship between the
 academic preparedness of the participants on their experiences with collegiate mathematics is not limited to subject content
 only The lessons learnt from the implied curriculum also play a role in their experiences with collegiate mathematics Of the
 three participants two have had to learn develop techniques for studying because they had not been sufficiently challenged in
 their previous environments to do so Each of the cases also highlights some powerful constructs needed for success in
 mathematics and at least two emphasize making connections between concepts procedures manipulatives tools and multiple
 approaches when solving problems This study contributes to an emerging area of research on student persistence in college
 level mathematics courses as well as to the ongoing discussions in mathematics education regarding the role importance of
 conceptual understanding and how to promote it The study makes visible some of the ways in which students post secondary
 experiences with mathematics are shaped by their perception of their mathematical preparation thus providing a basis for
 discussions of possible curricular change in the Bahamas It also suggests that issues such as confidence and school teacher
 expectations of students may play a role in the development of conceptual understanding **The Publishers Weekly** ,1921
