Mixed Methods Research in the Movement Sciences

Case Studies in Sport, Physical Education and Dance

Edited by Oleguer Camerino, Marta Castaner and Teresa Anguera

Published 12th June 2012 by Routledge – 240 pages

Mixed methods research techniques, combining both quantitative and qualitative elements, have become well established throughout the social, behavioural and natural sciences. This is the first book to focus on the application of mixed methods research in the movement sciences, specifically in sport, physical education and dance. Researchers and practitioners in each of these fields are concerned with the study of habitual behaviour in naturalistic contexts, and of the concurrent and sequential nature of events and states, precisely the kind of work that multi-method research design can help illuminate.

The book is arranged into four sections. The first provides a thorough overview of mixed methods procedures and research design, and summarizes their applicability to the movement sciences. The remaining sections then offer detailed case studies of mixed methods research in team and individual sports (analyzing hidden patterns of play and optimising technique); kinesics and dance (analyzing motor skills behaviour in childhood, and the complexity of motor responses in dance); and physical education (detecting interaction patterns in group situations, and optimizing non-verbal communication by teachers and sports coaches).

Mixed Methods Research in the Movement Sciences offers an important new tool for researchers and helps to close the gap between the analysis of expert performance and our understanding of the general principles of movement science. It is important reading for any student, researcher or professional with an interest in motor control, sport and dance pedagogy, coaching, performance analysis or decision-making in sport.

Detecting Doping in Sport Stephen Moston,Terry Engelberg,2016-11-10 The book explores the changing landscape of anti doping investigations which now largely centre on the collection of intelligence about doping through processes such as surveillance interviews with witnesses and interrogation of athletes It examines why and how investigative processes hitherto typically reserved for serious crimes have been co opted by anti doping agencies into a situation where their potential for harm has received little or no critical consideration This book highlights the opportunities and threats inherent in adopting new investigative processes It is expected that many of the same problems that have engulfed forensic investigations over the last two decades such as miscarriages of justice are likely to surface in future anti doping investigations Drawing on empirical research and theory from a range of disciplines including forensic psychology criminology policing law sports management and policy studies this book fills a scholarly vacuum on the investigation of doping through non biological detection methods
