Maria Kronfeldner,2018-10-16 A philosophical account of human nature that defends the concept against dehumanization Darwinian and developmentalist challenges Human nature has always been a foundational issue for philosophy What does it mean to have a human nature Is the concept the relic of a bygone age What is the use of such a concept What are the epistemic and ontological commitments people make when they use the concept In What s Left of Human Nature Maria Kronfeldner offers a philosophical account of human nature that defends the concept against contemporary criticism In particular she takes on challenges related to social misuse of the concept that dehumanizes those regarded as lacking human nature the dehumanization challenge the conflict between Darwinian thinking and essentialist concepts of human nature the Darwinian challenge and the consensus that evolution heredity and ontogenetic development result from nurture and nature After answering each of these challenges Kronfeldner presents a revisionist account of human nature that minimizes dehumanization and does not fall back on outdated biological ideas Her account is post essentialist because it eliminates the concept of an essence of being human pluralist in that it argues that there are different things in the world that correspond to three different post essentialist concepts of human nature and interactive because it understands nature and nurture as interacting at the developmental epigenetic and evolutionary levels On the basis of this she introduces a dialectical concept of an ever changing and looping human nature Finally noting the essentially contested character of the concept and the ambiguity and redundancy of the terminology she wonders if we should simply eliminate the term human nature altogether **CBSE Class 12 Biology Chapter-wise Question Bank - NCERT + Exemplar + PAST**

**Reconsidering Race** Kazuko Suzuki,Diego A. von Vacano,2018-05-01 Race is one of the most elusive phenomena of

social life While we generally know it when we see it it is not an easy concept to define Social science literature has argued that race is a Western concept that emerged with the birth of modern imperialism whether in the sixteenth century the Age of Discovery or the eighteenth century the Age of Enlightenment This book points out that there is a disjuncture between the way race is conceptualized in the social sciences and in recent natural science literature In the view of some proponents of natural scientific perspectives race has a biological and not just a purely social dimension The book argues that to more fully understand what we mean by race social scientists need to engage these new perspectives coming from genomics medicine and health policy To be sure the long dark shadow of eugenics and the Nazi use of scientific racism cast a pall over the effort to understand the complicated relationship between social science and medical science understandings of race While this book rejects pseudoscientific and hierarchical ways of looking at race and affirms that it is rooted in social grounds it makes the claim that it is time to move beyond merely repeating the race is a social construct mantra The chapters in this book consider three fundamental tensions in thinking about race one between theories that see race as fixed and those that see it as malleable a second between Western especially US based and non Western perspectives that decenter the US experience and a third between sociopolitical and biomedical concepts of race The book will help shed light on multiple contemporary concerns such as the place of race in identity formation ethno political conflict immigration policy social justice biomedical ethics and the carceral state *The American Bookseller* ,1888

together for the first time in an accessible and readable form a summary and assessment of John Paul II's contribution to bioethical issues and theories. It includes discussion of the Pope's views on the dignity of the person and the sanctity of human life and the application of these views to various difficulties in medical ethics such as abortion and embryo research, the right to health care and the problem of suffering.
