Sayable Space. Narrative Practices in Architecture Giovanni Corbellini, 2021-11-18 When a work reaches its maximum intensity wrote Le Corbusier a phenomenon of ineffable space occurs The ultimate quality of architecture would reside therefore in the resistance to its description However to tell us this and much more the Swiss master has published more than seventy books and his so compelling formula in supporting the ineffable also shows how words are able to grasp it This brief essay investigates the multiple intersections between discourse and design the way buildings try to talk with their own specific means how architects are trying to remain relevant without building the paradoxes of architecture description after its completion the modes of communication during the project processes the capacity of narrative to act before the project operations start and infiltrate the collective perception making possible innovative approaches *Minimally Invasive*

Geometric Aspects of Functional Analysis Joram Lindenstrauss, Vitali Milman, 2012-12-06 This is the sixth published volume of the Israel Seminar on Geometric Aspects of Functional Analysis The previous volumes are 1983 84 published privately by Tel Aviv University 1985 86 Springer Lecture Notes Vol 1267 1986 87 Springer Lecture Notes Vol 1317 1987 88 Springer Lecture Notes Vol 1376 1989 90 Springer Lecture Notes Vol 1469 As in the previous volumes the central subject of this volume is Banach space theory in its various aspects In view of the spectacular development in infinite dimensional Banach space theory in recent years like the solution of the hyperplane problem the unconditional basic sequence problem and the distortion problem in Hilbert space it is quite natural that the present volume contains substantially more contributions in this direction than the previous volumes This volume also contains many important contributions in the traditional directions of this seminar such as probabilistic methods in functional analysis non linear theory harmonic analysis and especially the local theory of Banach spaces and its connection to classical convexity theory in \mathbb{R}^n The papers in this volume are original research papers and include an invited survey by Alexander Olevskii of Kolmogorov's work on Fourier analysis which was presented at a special meeting on the occasion of the 90th birthday of A N Kolmogorov We are very grateful to Mrs M Herberg for her generous help in many directions which made the publication of this volume possible Joram Lindenstrauss Vitali Milman 1992 1994 Operator Theory Advances and Applications Vol

thesis we introduce the novel concept of relaxed barrier function based model predictive control and present a comprehensive theoretical and algorithmic framework for the design analysis and implementation of relaxed barrier function based MPC approaches Instead of treating the underlying optimization as an idealized static map a key motive of the MPC results and algorithms presented in this thesis is to study the interconnected dynamics of controlled plant and iterative optimization algorithm in an integrated barrier function based framework and to analyze the resulting overall closed loop system both from a systems theoretic and algorithmic perspective One of the presented main results is a novel class of barrier function based anytime MPC algorithms that guarantee important properties of the closed loop system independently of the number of optimization algorithm iterations that are performed at each sampling step The obtained theoretical results

are illustrated by various numerical examples and benchmark tests as well as by an experimental case study in which the proposed class of barrier function based MPC algorithms is applied to the predictive control of a self driving car
