Boyes, 2009-11-25 The discipline of instrumentation has grown appreciably in recent years because of advances in sensor technology and in the interconnectivity of sensors, computers, and control systems. This 4e of the Instrumentation Reference Book embraces the equipment and systems used to detect, track, and store data related to physical, chemical, electrical, thermal, and mechanical properties of materials, systems, and operations. While traditionally a key area within mechanical and industrial engineering, understanding this greater and more complex use of sensing and monitoring controls and systems is essential for a wide variety of engineering areas, from manufacturing to chemical processing to aerospace operations to even the everyday automobile. In turn, this has meant that the automation of manufacturing process industries and even building and infrastructure construction has been improved dramatically. And now, with remote wireless instrumentation, heretofore inaccessible or widely dispersed operations and procedures can be automatically monitored and controlled. This already well-established reference work will reflect these dramatic changes with improved and expanded coverage of the traditional domains of instrumentation as well as the cutting-edge areas of digital integration of complex sensor control systems. Thoroughly revised with up-to-date coverage of wireless sensors and systems as well as nanotechnologies' role in the evolution of sensor technology. Latest information on new sensor equipment, new measurement standards, and new software for embedded control systems, networking, and automated control. Three entirely new sections on Controllers, Actuators, and Final Control Elements, Manufacturing Execution Systems, and Automation Knowledge Base. Up-dated and expanded references and critical standards.
