

## Problem 11: Together II

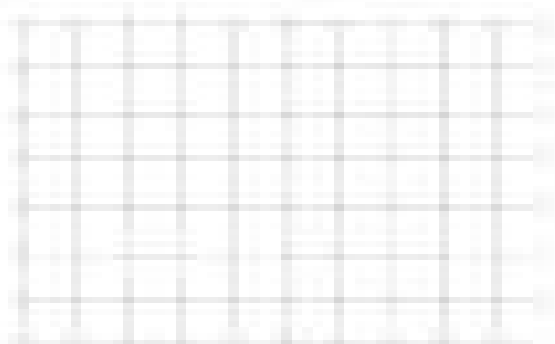

Water testing is generally recommended before construction starts on your system for its water-related features. For example, on Saturdays, Captain takes water samples and considers both milligrams of calcium and milligrams of iron that are found in the treatment and removal water system (see eqs).

Suppose that each day, Captain's laboratory receives half of the treatment in her system from the city before. Suppose this information is used to graph the water-related features.

15. Table of Data

Number of Days (before Saturday)	mg of Calcium (in Captain's system)
0	120
1	120
2	
3	
4	
5	
6	
7	

16. Graph of Data

17. What are the independent and dependent variables in the problem situation?

18. What are the domain and range of the problem situation?

19. Is the graph of the data increasing, decreasing?
