## Introduction

The purpose of this pack is to introduce the reader to the main features of the research process. The type of information which informs decisions about how to undertake a research project is described and supported by examples from primary care and other health services research. The pack is intended for health care professionals with little or no previous research knowledge.

If a project is worth doing then it is probably worth convincing an interested organisation to fund it. There are no guaranteed ways of securing funding but there are steps you can take to maximise your chances of success. Applying for research funding might sound like the starting point of the research process but applicants need to demonstrate a clear idea of the entire process of a research project, right up until what will happen at the end of the process (for example modes of dissemination and practical implementation of results), in order to convince a funding body that their money will be spent wisely.

The pack is split into two sections. The first section 'Getting Started', takes the reader through a whistle stop tour of the research process and provides advice on how to get beyond a vague research idea to something that (with expert help, hard work and lots of enthusiasm) has the potential to generate new insights into health care issues and concerns. The second section, 'Getting Funded', looks at the context of research funding in the UK and encourages the reader to put their own research ideas to the acid test of a funding application.

As many of the terms used may be either new or used in a context unfamiliar to readers, a glossary of terms is provided at the back of the pack. We have tried to make the exercises of practical use to the reader. Some of the exercises test the reader's understanding of the concepts contained within the pack, while others give the reader the opportunity to work with their research ideas about their own areas of interest.

The other resource packs in this series provide more detail on specific aspects of the research process. The reader is pointed to specific resource packs at various points within this pack. The full list of packs produced by The NIHR RDS EM / YH can be found at:

From Research to Manuscript Michael Jay Katz, 2009-01-21 Observations Plus Recipes It has been said that science is the orderly collection of facts about the natural world Scientists however are wary of using the word fact Fact has the feeling of

absoluteness and universality whereas scientific observations are neither absolute nor universal For example children have 20 deciduous baby teeth is an observation about the real world but scientists would not call it a fact Some children have fewer deciduous teeth and some have more Even those children who have exactly 20 deciduous teeth use the full set during only a part of their childhood When they are babies and toddlers children have less than 20 visible teeth and as they grow older children begin to lose their deciduous teeth which are then replaced by permanent teeth Children have 20 deciduous baby teeth is not even a complete scientific statement For one thing the statement children have 20 deciduous teeth does not tell us what we mean by teeth When we say teeth do we mean only those that can be seen with the unaided eye or do we also include the hidden unerupted teeth An observation such as children have 20 deciduous teeth is not a fact and by itself it is not acceptable as a scientific statement until its terms are explained scientifically children have 20 deciduous teeth must be accompanied by definitions and qualifiers
