

$$\text{Pressure} = \frac{\text{Force}}{\text{Area}}$$

$$\text{Force} = \frac{\text{Change in momentum}}{\text{time}}$$

Substituting it into the Pressure equation:

$$\text{Pressure} = \frac{\frac{\text{Change in momentum}}{\text{time}}}{\text{Area}}$$

$$\text{Pressure} = \frac{\text{Change in momentum}}{\text{Area} \times \text{Time}}$$

$$\text{Pressure} = \frac{\text{Total mass of all alpha particles} \times (\text{initial velocity} + \text{final velocity})}{\text{Area} \times \text{time}}$$

Now each alpha particle is 6.6×10^{-27} Kg and there is 5×10^4 particles

$$\text{So total mass} = 6.6 \times 10^{-27} \times 5 \times 10^4$$

$$\text{Area} = 1 \text{ cm}^2 = 10^{-4} \text{ m}^2$$

$$\text{initial velocity} = 1.5 \times 10^7 \text{ ms}^{-1}$$

$$\text{time} = 1 \text{ second}$$

$$\text{Pressure} = \frac{6.6 \times 10^{-27} \times 5 \times 10^4 (1.5 \times 10^7 + 0)}{10^{-4} \times 1}$$

$$\text{Pressure} = 4.95 \times 10^{-11} \approx 5 \times 10^{-11}$$

Economic report of the President United States. President (1945-1953 : Truman), **Technological Innovation in Legacy Sectors** William B. Bonvillian, Charles Weiss, 2015-08-18 The American economy faces two deep problems expanding innovation and raising the rate of quality job creation Both have roots in a neglected problem the resistance of Legacy economic sectors to innovation While the U S has focused its policies on breakthrough innovations to create new economic frontiers like information technology and biotechnology most of its economy is locked into Legacy sectors defended by technological economic political social paradigms that block competition from disruptive innovations that could challenge their models Americans like to build technology covered wagons and take them out west to open new innovation frontiers we don't head our wagons back east to bring innovation to our Legacy sectors By failing to do so the economy misses a major opportunity for innovation which is the bedrock of U S competitiveness and its standard of living Technological Innovation in Legacy Sectors uses a new unifying conceptual framework to identify the shared features underlying structural obstacles to innovation in major Legacy sectors energy air and auto transport the electric power grid buildings manufacturing agriculture health care delivery and higher education and develops approaches to understand and transform them It finds both strengths and obstacles to innovation in the national innovation environments a new concept that combines the innovation system and the broader innovation context for a group of Asian and European economies Manufacturing is a major Legacy sector that presents a particular challenge because it is a critical stage in the innovation process By increasingly offshoring production the U S is losing important parts of its innovation capacity Innovate here produce here where the U S took all the gains of its strong innovation system at every stage is being replaced by innovate here produce there which threatens to lead to produce there innovate there To bring innovation to Legacy sectors authors William Bonvillian and Charles Weiss recommend that policymakers focus on all stages of innovation from research through implementation They should fill institutional gaps in the innovation system and take measures to address structural obstacles to needed disruptive innovations In the specific case of advanced manufacturing the production ecosystem can be recreated to reverse jobless innovation and add manufacturing led innovation to the U S's still strong research oriented innovation system
