

## Grade 11 Advanced Functions

### Chapter 1 – Functions – Characteristics and Properties

#### Chapter 1.1- Functions

##### In Summary

###### Key Ideas

- A function is a relation in which there is a unique output for each input. This means that each value of the independent variable (the domain) must correspond to one, and only one, value of the dependent variable (the range).
- Functions can be represented graphically, numerically, or algebraically.

Graphical Example	Numerical Examples	Algebraic Examples												
	<p>Set of ordered pairs: <math>\{(1, 3), (3, 5), (-2, 9), (5, 11)\}</math></p> <p>Table of values:</p> <table data-bbox="691 456 915 608"><thead><tr><th><math>x</math></th><th><math>y</math></th></tr></thead><tbody><tr><td>-2</td><td>-4</td></tr><tr><td>-1</td><td>1</td></tr><tr><td>0</td><td>0</td></tr><tr><td>1</td><td>1</td></tr><tr><td>2</td><td>-4</td></tr></tbody></table> <p>Mapping diagram:</p> 	$x$	$y$	-2	-4	-1	1	0	0	1	1	2	-4	$y = 2 \sin(3x) + 4$ <p style="text-align: center;">or</p> $f(x) = 2 \sin(3x) + 4$
$x$	$y$													
-2	-4													
-1	1													
0	0													
1	1													
2	-4													

###### Need to Know

- Function notation,  $f(x)$ , is used to represent the values of the dependent variable in a function, so  $y = f(x)$ .
- You can use the vertical line test to check whether a graph represents a function. A graph represents a function if every vertical line intersects the graph in, at most, one point. This shows that there is only one element in the range for each element in the domain.
- The domain and range of a function depend on the type of function.
- The domain and range of a function that models a particular situation may need to be restricted, based on the situation. For example, negative values may not have meaning when dealing with variables such as time.
