

GENERAL

The Cruise Control system provides automatic vehicle speed control. The electronics and stepper motor are contained in a control module mounted under the left side cover. The stepper motor actuates the cruise control cable through a gear train and ribbon reel.

SYSTEM OPERATION

To engage and disengage the cruise control system, proceed as follows:

1. While riding in fourth or fifth gear, turn the Cruise ON/OFF Switch to the ON position. See Figure 8-123. The switch is located on the fairing cap of FLHTCU models, the instrument nacelle of FLTR models, and the left handlebar lower switch housing on FLHRC models. The Cruise Enabled/Engaged lamp in the tachometer face (speedometer on FLHRC models) turns red to indicate that the system is activated. See Figure 8-125. A red lamp in the switch on both FLHTCU and FLTR models also indicates this condition to the rider.
2. Power (12 vdc) is supplied to the cruise control module through a 15 amp fuse located in the fuse block mounted under the left side cover.
3. With the motorcycle traveling at the desired "cruise" speed (30 mph/48 km/h to 85 mph/137 km/h), momentarily push the Cruise SET/RESUME switch to SET. See Figure 8-124.

Figure 8-123. Fairing Cap (FLHTCU)

Figure 8-124. Right Handlebar Switch Assembly (FLTR, FLHTCU)

Figure 8-125. Instrument Panel (FLHTCU)

The cruise control module "reads" the vehicle speed sensor (VSS) output to establish the desired vehicle speed. The module then sends a signal to the stepper motor which drives the ribbon reel to take up the slack in the cruise cable. The Cruise Enabled/Engaged lamp in the tachometer face (speedometer on FLHRC models) turns from red to green to indicate that the cruising speed is locked in. See Figure 8-125.

4. The cruise control module monitors both the engine RPM and the VSS output speed signal. The module signals the stepper motor to open or close the throttle to keep the speedometer output speed signal constant. The engine RPM is monitored to detect engine
