These are Basic Principles, parameters, systems, and applied mathematical models used in the rheological studies. Melt flow analysis of different non-Newtonian fluids in laminar flow, transition between laminar and turbulent flow, and modified Reynolds number. The effects of different physical and molecular parameters on purely viscous rheological response of polymer melts and solutions. Principles of rheometry and different types of viscometers and on-line rheometers. The static and dynamic viscoelastic response of the polymer melts and solutions, viscoelasticity, mechanical models, and Boltzmann superposition principle. Molecular structure-viscoelasticity relationship and linear and non-linear viscoelasticity. Effects of different processes, materials, parameters like temperature, fillers, micro and nano fillers, and molecular parameters like MW, MWD. The role of rheology in polymer processing in different equipment. Modified power law constants and two-range power law constants for a large number of polymers. Rheology software program in Java, comparison of different polymer rheological models using the rheology software, and answers to the problems.
