The fifth edition of the *Highway Capacity Manual* (HCM 2010), recently released by the Transportation Research Board (TRB), incorporates results from more than \$5

million of research completed since the publication of the HCM 2000. This latest edition significantly updates the methodologies that engineers and planners use to assess the traffic and environmental effects of highway projects.

HCM 2010 introduces several firsts, including

- 1. An integrated multimodal approach to the analysis and evaluation of urban streets from the points of view of automobile drivers, transit passengers, bicyclists, and pedestrians,
- 2. Guidance on the proper application of microsimulation analysis and the evaluation of those results,
- 3. The presentation of active traffic management in relation to demand and capacity, and
- 4. Generalized service volume tables to assist planners in sizing roadway facilities.

Key Changes

Following are some of the key changes in the HCM 2010:

- 1. The signalized intersections procedure models

HCM 2010 features findings on active traffic management, which strategically deploys an array of measures to relieve congestion.

Among the new features of HCM 2010 is updated material on the impact of weather and work zones on freeway capacity.

the operation of an actuated controller. A new incremental queue accumulation (IQA) method calculates the delay term d and the length term Q . Although equivalent to the HCM 2000 method for the idealized case, the IQA method is more flexible and can accommodate nonideal cases, such as coordinated arrivals and multiple green periods with differing saturation flow rates, which can occur with protected-plus-permitted left turns. A check procedure for left-turn lane overflow also has been added.

- 2. Unsignalized intersections, previously a single chapter, now are described in three chapters, covering two-way stop-controlled (TWSC) intersections, all-way stop-controlled (AWSC) intersections, and roundabouts. The TWSC method in the HCM 2010 can analyze intersections along six-lane streets, and the AWSC method now includes a queue-estimation procedure. The roundabout material is completely updated, based on the work of National Cooperative Highway Research Program (NCHRP) Project 3-65,¹ which developed a comprehensive database of U.S. roundabout operations and established new methodologies for evaluating roundabout performance. The chapter adds a level-of-service (LOS) table for roundabouts.
- 3. The interchange ramp terminals chapter has
