Scientific and Medical Aspects of Human Reproductive Cloning National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Policy and Global Affairs, Committee on Science, Engineering, and Public Policy, 2002-06-17 Human reproductive cloning is an assisted reproductive technology that would be carried out with the goal of creating a newborn genetically identical to another human being. It is currently the subject of much debate around the world involving a variety of ethical, religious, societal, scientific, and medical issues. Scientific and Medical Aspects of Human Reproductive Cloning considers the scientific and medical sides of this issue plus ethical issues that pertain to human subjects research. Based on experience with reproductive cloning in animals, the report concludes that human reproductive cloning would be dangerous for the woman, fetus, and newborn and is likely to fail. A comprehensive exposition of the law relating to birth control, abortion, pregnancy, childbirth, surrogacy, and assisted conception is accompanied by an exploration of some of the complex ethical dilemmas that emerge when one of the most intimate areas of human life is subjected to regulatory control. Throughout the book, two principal themes recur. First, particular emphasis is placed upon the special difficulties that arise in regulating new technological intervention in all aspects of the reproductive process. Second, the concept of reproductive autonomy is both interrogated and defended. This book offers a readable and engaging account of the complex relationships between law, technology, and reproduction. It will be useful for lecturers and students taking medical law or ethics courses. It should also be of interest to anyone with a more general interest in women's bodies and the law or with the profound regulatory consequences of new technologies.
