## The Caribbean Hurricane Experience

Hurricanes are a fact of life in the Caribbean (See [Appendix I](#)). Within the past nine years, from 1988 through 1997, several hurricanes have unleashed their fury on the islands of the Caribbean. Hurricanes David in 1979, Allen in 1980, Gilbert in 1988, Hugo in 1989 and Luis and Marilyn in 1995 caused significant damage to hotels in Dominica, St. Lucia, Jamaica, Montserrat, Antigua,

Statistical Methods for QTL Mapping Zehua Chen, 2013-11-01 While numerous advanced statistical approaches have recently been developed for quantitative trait loci QTL mapping the methods are scattered throughout the literature Statistical Methods for QTL Mapping brings together many recent statistical techniques that address the data complexity of QTL mapping After introducing basic genetics topics and statistical principles the author discusses the principles of quantitative genetics general statistical issues of QTL mapping commonly used one dimensional QTL mapping approaches and multiple interval mapping methods He then explains how to use a feature selection approach to tackle a QTL mapping problem with dense markers The book also provides comprehensive coverage of Bayesian models and MCMC algorithms and describes methods for multi trait QTL mapping and eQTL mapping including meta trait methods and multivariate sequential procedures This book emphasizes the modern statistical methodology for QTL mapping as well as the statistical issues that arise during this process It gives the necessary biological background for statisticians without training in genetics and likewise covers statistical thinking and principles for geneticists Written primarily for geneticists and statisticians specializing in QTL mapping the book can also be used as a supplement in graduate courses or for self study by PhD students working on QTL mapping projects **Aware**, 2005 Cartographies of Danger Mark Monmonier, 2008-04-15 No place is perfectly safe but some places are more dangerous than others Whether we live on a floodplain or in Tornado Alley near a nuclear facility or in a neighborhood poorly lit at night we all co exist uneasily with natural and man made hazards As Mark Monmonier shows in this entertaining and immensely informative book maps can tell us a lot about where we can anticipate certain hazards but they can also be dangerously misleading California for example takes earthquakes seriously with a comprehensive program of seismic mapping whereas Washington has been comparatively lax about earthquakes in Puget Sound But as the Northridge earthquake in January 1994 demonstrated all too clearly to Californians even reliable seismic hazard maps can deceive anyone who misinterprets known fault lines as the only places vulnerable to earthquakes Important as it is to predict and prepare for catastrophic natural hazards more subtle and persistent phenomena such as pollution and crime also pose serious dangers that we have to cope with on a daily basis Hazard zone maps highlight these more insidious hazards and raise awareness about them among planners local officials and the public With the help of many maps illustrating examples from all corners of the United States Monmonier demonstrates how hazard mapping reflects not just scientific understanding of hazards but also perceptions of risk and how risk can be reduced Whether you live on a faultline or a coastline near a toxic waste dump or an EMF generating power line you ignore this book's plain language advice on geographic hazards and how to avoid them at your own peril Mapping the Zone National Research Council, Water Science and Technology Board, Board on Earth Sciences and Resources/Mapping Science Committee, Committee on FEMA Flood Maps, 2009-05-15 Federal Emergency Management Agency FEMA Flood Insurance Rate Maps portray the height and extent

to which flooding is expected to occur and they form the basis for setting flood insurance premiums and regulating development in the floodplain. As such, they are an important tool for individuals, businesses, communities, and government agencies to understand and deal with flood hazard and flood risk. Improving map accuracy is therefore not an academic question; better maps help everyone. Making and maintaining an accurate flood map is neither simple nor inexpensive. Even after an investment of more than 1 billion to take flood maps into the digital world, only 21 percent of the population has maps that meet or exceed national flood hazard data quality thresholds. Even when floodplains are mapped with high accuracy, land development and natural changes to the landscape or hydrologic systems create the need for continuous map maintenance and updates. Mapping the Zone examines the factors that affect flood map accuracy, assesses the benefits and costs of more accurate flood maps, and recommends ways to improve flood mapping, communication, and management of flood-related data.

*Flying Higher* Morten Beyer, 2009-10-08 The rise of transport airlines stems from the final days of World War II when airplanes were used mostly by the military and for Government mail. Juan Trippe's idea of an Empire of the Air transporting people was a distant dream. There were no footsteps to follow. Beyer, working himself up through the ranks, cast his practical eye at the many aspects of how an airline could run and prosper and became known as an efficiency wizard. During his international career, he says what it was like dealing with government regulations; he describes the fleets and their maintenance, and at one point, a revolution. All this is interspersed with some hilarious anecdotes. It was a risky business, and this is the true adventure of Mort Beyer's life as the president of several scheduled and non-scheduled airlines over a span of sixty years.
