Laser Ablation And Its Applications:

Laser Ablation and its Applications Claude Phipps, 2007-01-17 Laser ablation describes the interaction of intense optical fields with matter in which atoms are selectively driven off by thermal or nonthermal mechanisms The field of laser ablation physics is advancing so rapidly that its principal results are seen only in specialized journals and conferences This will be the first book that combines the most recent results in this rapidly advancing field with authoritative treatment of laser ablation and its applications including the physics of high power laser matter interaction Many practical applications exist ranging from inertial confinement fusion to propulsion of aerostats for pollution monitoring to laser ignition of hypersonic engines to laser cleaning nanoscale contaminants in high volume computer hard drive manufacture to direct observation of the electronic or dissociative states in atoms and molecules to studying the properties of materials during 200kbar shocks developed in 200fs

Laser Ablation and Its Applications Claude Phipps, 2007 Laser ablation describes the interaction of intense optical fields with matter in which atoms are selectively driven off by thermal or nonthermal mechanisms This is the first book that combines the most recent results in this rapidly advancing field with authoritative treatment of laser ablation and its applications including the physics of high power laser matter interaction

Pulsed Laser Ablation of Solids Mihai Stafe, Aurelian Marcu, Niculae N. Puscas, 2013-11-09 The book introduces the state of the art of pulsed laser ablation and its applications It is based on recent theoretical and experimental studies The book reaches from the basics to advanced topics of pulsed laser ablation Theoretical and experimental fundamental phenomena involved in pulsed laser ablation are discussed with respect to material properties laser wavelength fluence and intensity regime of the light absorbed linearly or non linearly in the target material The energy absorbed by the electrons leads to atom molecule excitation ionization and or direct chemical bond breaking and is also transferred to the lattice leading to material heating and phase transitions Experimental non invasive optical methods for analyzing these phenomena in real time are described Theoretical models for pulsed laser ablation and phase transitions induced by laser beams and laser vapour plasma interaction during the plume expansion above the target are also presented Calculations of the ablation speed and dimensions of the ablated micro and nano structures are performed The validity and required refinement of different models in different experimental conditions is provided The pulsed laser deposition process which bases on collecting the ablated particles on a surface is analyzed in terms of efficiency and quality of the deposited films as a function of ambient conditions target material laser parameters and substrate characteristics The interaction between the incident laser and the ablation plasma is analyzed with respect to its influence on the structures of the deposited films and its capacity to generate high harmonics and single attosecond pulses which are highly desirable in pump probe experiments

Laser Ablation Tatiana Itina, 2017-12-21 Shortly after the demonstration of the first laser the most intensely studied theoretical topics dealt with laser matter interactions Many experiments were undertaken to clarify the major ablation mechanisms At the same time numerous theoretical studies both

analytical and numerical were proposed to describe these interactions. These studies paved the way toward the development of numerous laser applications ranging from laser micro and nanomachining to material analysis, nanoparticle and nanostructure formation, thin film deposition, etc. Recently, more and more promising novel fields of laser applications have appeared, including biomedicine, catalysis, photovoltaic cells, etc. This book intends to provide the reader with a comprehensive overview of the current state of the art in laser ablation, from its fundamental mechanisms to novel applications.

Laser Ablation John C. Miller, 2013-11-09. Laser Ablation provides a broad picture of the current understanding of laser ablation and its many applications from the views of key contributors to the field. Discussed in detail are the electronic processes in laser ablation of semiconductors and insulators, the post-ionization of laser-desorbed biomolecules, Fourier transform mass spectroscopy, the interaction of laser radiation with organic polymers, laser ablation and optical surface damage, laser desorption/ablation with laser detection, and laser ablation of superconducting thin films.

LIGA and its Applications Volker Saile, Ulrike Wallrabe, Osamu Tabata, Jan G. Korvink, 2009-01-07. Covering technological aspects as well as the suitability and applicability of various kinds of uses, this handbook shows optimization strategies, techniques, and assembly pathways to achieve the combination of complex, even three-dimensional structures with simple manufacturing steps. The authors provide information on markets, commercialization opportunities, and aspects of mass or large-scale production as well as design tools, experimental techniques, novel materials, and ideas for future improvements. Not only do they weigh up cost versus quantity; they also consider CMOS and LIGA strategies. Of interest to physicists, electronics engineers, materials scientists, institutional and industrial libraries, as well as graduate students of the relevant disciplines.

State-of-the-Art Laser Spectroscopy and its Applications : Volume II Yufei Ma, Qun Hao, Karol Krzempek, 2023-02-09.

Inductively Coupled Plasma Spectrometry and its Applications Steve J. Hill, 2008-04-15. The first edition of Inductively Coupled Plasma Spectrometry and its Applications was written as a handbook for users who wanted a better understanding of the theory, augmented by a practical insight of how best to approach a range of applications, and to provide a useful starting point for users trying an approach or technique new to them. These objectives have been retained in the second edition, but a slight shift in emphasis gives the volume an overall perspective that is more forward-looking. Structured into 11 chapters, the current edition is a thorough revision of the original, covering the principles of inductively coupled plasmas, instrumentation, methodology, and applications within environmental analysis, earth science, food science, and clinical medicine. Each chapter, written by internationally recognised leaders in their specific subject areas, provides enough detail to be useful to both the new and experienced users. Full account is taken of recent developments such as high-resolution instruments, novel detection systems, and electrospray techniques. Written for all analytical scientists but particularly those involved in atomic spectroscopy and in environmental, geochemical, clinical, or food analysis, this timely and informative book will be an essential reference in their use of inductively coupled plasma to achieve their own scientific goals.
