Park, Donghyun Baek, Sungjoon Lim, Jingon Joung, Suhyun Park, Han L. Lee, Woo June Choi, Taeho Im, 2020-01-15 Provides practical examples of circuit design and analysis using PSpice MATLAB and the Smith Chart This book presents the three technologies used to deal with electronic circuits MATLAB PSpice and Smith chart It gives students researchers and practicing engineers the necessary design and modelling tools for validating electronic design concepts involving bipolar junction transistors BJTs field effect transistors FET OP Amp circuits and analog filters Electronic Circuits with MATLAB PSpice and Smith Chart presents analytical solutions with the results of MATLAB analysis and PSpice simulation This gives the reader information about the state of the art and confidence in the legitimacy of the solution as long as the solutions obtained by using the two software tools agree with each other For representative examples of impedance matching and filter design the solution using MATLAB and Smith chart Smith V4 1 are presented for comparison and crosscheck This approach is expected to give the reader confidence in and a deeper understanding of the solution In addition this text Increases the reader s understanding of the underlying processes and related equations for the design and analysis of circuits Provides a stepping stone to RF radio frequency circuit design by demonstrating how MATLAB can be used for the design and implementation of microstrip filters Features two chapters dedicated to the application of Smith charts and two port network theory Electronic Circuits with MATLAB PSpice and Smith Chart will be of great benefit to practicing engineers and graduate students interested in circuit theory and RF circuits *System* , 1923 **High Frequency Techniques** Joseph F. White, 2016-08-03 This textbook is an introduction to microwave engineering The scope of this book extends from topics for a first course in electrical engineering in which impedances are analyzed using complex numbers through the introduction of transmission lines that are analyzed using the Smith Chart and on to graduate level subjects such as equivalent circuits for obstacles in hollow waveguides analyzed using Green s Functions This book is a virtual encyclopedia of circuit design methods Despite the complexity topics are presented in a conversational manner for ease of comprehension The book is not only an excellent text at the undergraduate and graduate levels but is as well a detailed reference for the practicing engineer Consider how well informed an engineer will be who has become familiar with these topics as treated in High Frequency Techniques in order of presentation Brief history of wireless radio and the Morse code U S Radio Frequency Allocations Introduction to vectors AC analysis and why complex numbers and impedance are used Circuit and antenna reciprocity Decibel measure Maximum power transfer Skin effect Computer simulation and optimization of networks LC matching of one impedance to another Coupled Resonators Uniform transmission lines for propagation VSWR return Loss and mismatch error The Telegrapher Equations derived Phase and Group Velocities The Impedance Transformation Equation for lines derived Fano s and Bode s matching limits The Smith Chart derived Slotted
