Laser TV Fouad Sabry, 2022-02-21

What Is Laser TV?
 Laser color television or laser color video display utilizes two or more individually modulated optical laser rays of different colors to produce a combined spot that is scanned and projected across the image plane by a polygon mirror system or less effectively by optoelectronic means to produce a color television display. The systems work either by scanning the entire picture a dot at a time and modulating the laser directly at high frequency, much like the electron beams in a cathode ray tube, or by optically spreading and then modulating the laser and scanning a line at a time, the line itself being modulated in much the same way as with digital light processing (DLP).

Restore, Relieve - Bridging Clinical and Engineering Solutions in Neurorehabilitation Winnie Jensen, Ole Kæseler Andersen, Metin Akay, 2014-06-17 The book is the proceedings of the 2nd International Conference on NeuroRehabilitation ICNR 2014 held 24th-26th June 2014 in Aalborg Denmark. The conference featured the latest highlights in the emerging and interdisciplinary field of neural rehabilitation engineering and identified important healthcare challenges the scientific community will be faced with in the coming years. Edited and written by leading experts in the field, the book includes keynote papers, regular conference papers, and contributions to special and innovation sessions covering the following main topics: neuro rehabilitation applications and solutions for restoring impaired neurological functions, cutting edge technologies and methods in neuro rehabilitation and translational challenges in neuro rehabilitation. Thanks to its highly interdisciplinary approach, the book will not only be a highly relevant reference guide for academic researchers, engineers, neurophysiologists, neuroscientists, physicians, and physiotherapists working at the forefront of their field, but will also help to act as a bridge between the scientific, engineering, and medical communities.
