Scientific Computing and Cultural Heritage Hans Georg Bock, Willi Jäger, Michael J. Winckler, 2012-10-23. The sheer computing power of modern information technology is changing the face of research not just in science, technology, and mathematics, but in humanities and cultural studies too. Recent decades have seen a major shift both in attitudes and deployment of computers, which are now vital and highly effective tools in disciplines where they were once viewed as elaborate typewriters. This revealing volume details the vast array of computing applications that researchers in the humanities now have recourse to, including the dissemination of scholarly information through virtual co-laboratories, data retrieval, and the modeling of complex processes that contribute to our natural and cultural heritage. One key area covered in this book is the versatility of computers in presenting images and graphics, which is transforming the analysis of data sets and archaeological reconstructions alike. The papers published here are grouped into three broad categories that cover mathematical and computational methods, research developments in information systems, and a detailed portrayal of ongoing work on documenting, restoring, and presenting cultural monuments, including the temples in Pompeii and the Banteay Chhmar temples of the Angkorian period in present-day Cambodia. Originally presented at a research workshop in Heidelberg, Germany, they reflect the rapidly developing identity of computational humanities as an interdisciplinary field in its own right, as well as demonstrating the breadth of perspectives in this young and vibrant research area. Characterization of Modern and Historical Seismic-Tsunami Events, and Their Global-Societal Impacts Y. Dilek, Y. Ogawa, Y. Okubo, 2021-06-22.

Earthquakes and tsunamis are devastating geohazards with significant societal impacts. Most recent occurrences have shown that their impact on the stability of nations, societies, and the world's geopolitics is immense, potentially triggering a tipping point for a major downturn in the global economy. This Special Publication presents the most current information on the causes and effects of some of the modern and historical earthquake and tsunami events, and effective practices of risk assessment, disaster management implemented by various governments, international organizations, and intergovernmental agencies. Findings reported here show that the magnitude of human casualties and property loss resulting from earthquakes and tsunamis are highly variable around the globe, and that increased community, national, and global resilience is significant to empower societal preparedness for such geohazards. It is clear that all stakeholders, including scientists, policymakers, governments,

media and world organizations must work together to disseminate accurate objective and timely information on geohazards and to develop effective legislation for risk reduction and realistic hazard mitigation management measures in our globally connected world of today

Digital Geoarchaeology Christoph Siart, Markus Forbriger, Olaf Bubenzer, 2017-12-03 This book focusses on new technologies and multi method research designs in the field of modern archaeology which increasingly crosses academic boundaries to investigate past human environmental relationships and to reconstruct palaeolandscapes It aims at establishing the concept of Digital Geoarchaeology as a novel approach of interdisciplinary collaboration situated at the scientific interface between classical studies geosciences and computer sciences Among others the book includes topics such as geographic information systems spatiotemporal analysis remote sensing applications laser scanning digital elevation models geophysical prospecting data fusion and 3D visualisation categorized in four major sections Each section is introduced by a general thematic overview and followed by case studies which vividly illustrate the broad spectrum of potential applications and new research designs Mutual fields of work and common technologies are identified and discussed from different scholarly perspectives By stimulating knowledge transfer and fostering interdisciplinary collaboration Digital Geoarchaeology helps generate valuable synergies and contributes to a better understanding of ancient landscapes along with their forming processes Chapters 1 2 6 8 and 14 are published open access under a CC BY 4 0 license at link.springer.com
