Trombly Latham, 2008 The definitive work on occupational therapy for physical dysfunction returns in its Sixth Edition with reputable co editors and clinical academic and consumer contributors This text provides a current and well rounded view of the field from theoretical rationale to evaluation treatment and follow up Through the Occupational Functioning Model OFM the Sixth Edition continues to emphasize the conceptual foundation and scientific basis for practice including evidence to support the selection of appropriate assessments and interventions NEW TO THIS EDITION Student DVD with video clips demonstrating range of motion manual muscle testing construction of hand splints and transferring patients Evidence Tables summarize the evidence behind key topics and cover Intervention Participants Dosage Type of Best Evidence Level of Evidence Benefit Statistical Probability and Reference Assessment Tables summarize key assessment tools and cover Instrument and Reference Description Time to Administer Validity Reliability Sensitivity and Strengths and Weaknesses *Enabling Environments* Edward Steinfeld, G. Scott Danford, 2013-06-29 This volume is the first effort to compile representative work in the emerging research area on the relationship of disability and physical environment since *Barrier Free Environments* edited by Michael Bednar was published in 1977 Since that time disability rights legislation like the Americans with Disabilities Act in the United States the worldwide growth of the independent living movement rapid deinstitutionalization and the maturation of functional assessment methodology have all had their impact on this research area The impact has been most noticeable in two ways fostering the integration of environmental variables in rehabilitation research and practice and changing paradigms for environmental interventions As the contributions in this volume demonstrate the relationship of disability and physical environment is no longer of interest primarily to designers and other professionals concerned with managing the resources of the built environment The physical environment has always been recognized as an important

variable affecting rehabilitation outcome Until recently however concepts and tools were not available to measure its impact in clinical practice and outcomes research In particular lack of a theoretical foundation that integrated environment with the disablement process hampered development of both research and clinical methodology Thus the physical environment received little attention from the mainstream rehabilitation research community However this situation is changing rapidly
