Aircraft Structures for Engineering Students T.H.G. Megson, 2013 Aircraft Structures for Engineering Students Fifth Edition is the leading self contained aircraft structures course text It covers all fundamental subjects including elasticity structural analysis airworthiness and aeroelasticity The author has revised and updated the text throughout and added new examples and exercises using Matlab Additional worked examples make the text even more accessible by showing the application of concepts to airframe structures The text is designed for undergraduate and postgraduate students of aerospace and aeronautical engineering It is also suitable for professional development and training courses New worked examples throughout the text aid understanding and relate concepts to real world applications Matlab examples and exercises added throughout to support use of computational tools in analysis and design An extensive aircraft design project case study shows the application of the major techniques in the book

**Structural Equation Modeling** Jichuan Wang, Xiaoqian Wang, 2012-07-31 A reference guide for applications of SEM using Mplus Structural Equation Modeling Applications Using Mplus is intended as both a teaching resource and a reference guide Written in non mathematical terms this book focuses on the conceptual and practical aspects of Structural Equation Modeling SEM Basic concepts and examples of various SEM models are demonstrated along with recently developed advanced methods such as mixture modeling and model based power analysis and sample size estimate for SEM The statistical modeling program Mplus is also featured and provides researchers with a flexible tool to analyze their data with an easy to use interface and graphical displays of data and analysis results Key features Presents a useful reference guide for applications of SEM whilst systematically demonstrating various advanced SEM models such as multi group and mixture models using Mplus Discusses and demonstrates various SEM models using both cross sectional and longitudinal data with both continuous and categorical outcomes Provides step by step instructions of model specification and estimation as well as detail interpretation of Mplus results Explores different methods for sample size estimate and statistical power analysis for SEM By following the examples provided in this book readers will be able to build their own SEM models using Mplus Teachers graduate students and researchers in social sciences and health studies will also benefit from this book

Fundamentals of Structural Analysis, 2nd Edition Roy, Sujit Kumar & Chakrabarty Subrata, 2003 For B E B Tech in Civil Engineering and also useful for M E M Tech students The book takes an integral look at structural engineering starting with fundamentals and ending with computer analysis This book is suitable for 5th 6th and 7th semesters of undergraduate course In this edition a new chapter on plastic analysis has been added A large number of examples have been worked out in the book so that students can master the subject by practising the examples and problems

Basic and Advanced Bayesian Structural Equation Modeling Sik-Yum Lee, Xin-Yuan Song, 2012-07-05 This book provides clear instructions to researchers on how to apply Structural Equation Models SEMs for analyzing the inter relationships between observed and latent variables Basic and Advanced

Bayesian Structural Equation Modeling introduces basic and advanced SEMs for analyzing various kinds of complex data such as ordered and unordered categorical data multilevel data mixture data longitudinal data highly non normal data as well as some of their combinations In addition Bayesian semiparametric SEMs to capture the true distribution of explanatory latent variables are introduced whilst SEM with a nonparametric structural equation to assess unspecified functional relationships among latent variables are also explored Statistical methodologies are developed using the Bayesian approach giving reliable results for small samples and allowing the use of prior information leading to better statistical results Estimates of the parameters and model comparison statistics are obtained via powerful Markov Chain Monte Carlo methods in statistical computing Introduces the Bayesian approach to SEMs including discussion on the selection of prior distributions and data augmentation Demonstrates how to utilize the recent powerful tools in statistical computing including but not limited to the Gibbs sampler the Metropolis Hasting algorithm and path sampling for producing various statistical results such as Bayesian estimates and Bayesian model comparison statistics in the analysis of basic and advanced SEMs Discusses the Bayes factor Deviance Information Criterion DIC and L<sub>nu</sub> measure for Bayesian model comparison Introduces a number of important generalizations of SEMs including multilevel and mixture SEMs latent curve models and longitudinal SEMs semiparametric SEMs and those with various types of discrete data and nonparametric structural equations Illustrates how to use the freely available software WinBUGS to produce the results Provides numerous real examples for illustrating the theoretical concepts and computational procedures that are presented throughout the book Researchers and advanced level students in statistics biostatistics public health business education psychology and social science will benefit from this book
